Introduction

It is my pleasure to share INCLIVA's 2017 Annual Scientific Report with you, my first as General and Scientific Director. As in previous years, this document evaluates scientific activity carried out during 2017 by INCLIVA research groups at the *Hospital Clínico Universitario* of Valencia and its Department of Health, the University of Valencia and the IUIVI (Valencia Fertility Institute).

The purpose of this report is to help analyze 2017's results in research and administration, as a basis for implementing the new approaches and changes needed to rise to our future challenges. **This year represents an important milestone for several reasons.**

Changes in INCLIVA management

The board of INCLIVA has renewed its management, and I am proud to be appointed the new General Director, also taking over the responsibilities of Scientific Director. The appointment was proposed by the Institute's Governing Board on accepting the resignations of Dr. Rafael Carmena and Dr. Josep Redón.

Dr. Josep Redón held the position of Scientific Director from June 2010 and Dr. Rafael Carmena was Director General from May 2012. It was during Dr. Josep Redón's term as Scientific Director that INCLIVA was accredited as Health Research Institute, and this accreditation was renewed in February 2017. Both the Board of Trustees and INCLIVA's researcher community have great respect and appreciation for the achievements of both men during these years, a key period for the Institute in which scientific and research activity has grown significantly and INCLIVA has established itself as a center of reference.

This Board also appointed an Economic Director, Mr. Vicente de Juan, previously the financial-administrative director.

Reaccreditation as a Health Research Institute

In 2016 INCLIVA applied for renewal of accreditation, as established by the June 24 Royal Decree 279/2016 on biomedical or health research institute accreditation, and after a successful audit INCLIVA's accreditation as a Health Research Institute was renewed through the Carlos III Health Institute on March 13, 2017.

Increased quality research output

Turning to scientific output, during 2017 INCLIVA produced 584 documents and surpassed the impact factor barrier of 3,600, thus continuing the upward trend seen in recent years. The quality of

published scientific output was also remarkable: articles published in magazines of the first and second quartiles of their respective categories represented 56% and 20% of total output, respectively.

In terms of **competitive funding** for new scientific research projects, INCLIVA groups obtained 19 projects within the National R&D & Innovation Plan framework, four international projects, one Valencian Government-funded project and five competitive grants from privately-financed institutions. The grants received for health and technological development research projects in the Strategic Action in Health framework, and the Research Challenges project have provided INCLIVA with nearly **two million euros** of funding for the next three years, in addition to the funding received for the institute to continue working in three Platforms supporting research in technology and health sciences (the Biobanks platform, the Clinical research and clinical trials units platform, and the Innovation platform) with a total of **€455,400** in funding. During 2017 INCLIVA maintained almost 160 competitive projects active.

INCLIVA research groups also participate in cooperative research networks such as **CIBER**, with a presence in most of the thematic areas (diabetes, oncology, cardiovascular, aging, respiratory, rare), as well as forming part of groups in **RETIC**.

In clinical research, since the 2016 approval of new Royal Decree 1090/2015 the **Clinical Research Ethics Committee of the Hospital Clínico** has acted as reference committee in 16 studies, and in 2017 143 new clinical studies were initiated, resulting in a total of 391 active clinical studies during the year.

Among its initiatives to promote research and training culture, during 2017 INCLIVA continued with its **Training Plan**,

collaborating with different hospital departments in organizing and coordinating 42 training initiatives, including 16 courses, 21 workshops, three seminars and two conferences. In addition, as per every year, the Institute supported training in centers of excellence, awarding a total of 21 grants for research stays aimed at learning new clinical and research techniques.

During 2017, grants have been obtained from different **Human Resource Programs**, such as the **Joan Rodés** Program, which awarded the first funding of this kind to the institution enabling us to contract an oncology specialist with extensive research experience. Others include the **Río Hortega** Program, the **Miguel Servet** Program, the Ministry of Education **Predoctoral and Postdoctoral** Programs, as well as private grants such as the Spanish Cancer Association Predoctoral grants. Finally, participation in postgraduate programs has led to **80 doctoral theses** defended in 2017.

Encouraging collaborative research

This year the **VLC-Bioclinic Program**, together with the University of Valencia, has again funded five innovative collaborative projects and nine preparatory actions for cooperative research projects. The main aim of this initiative is to support translational research between researchers and physicians from the two institutions.

Thanks to the **REDIT-INCLIVA Program** four initiatives have also been funded, in collaboration with the Institute of Information Technology (ITI), AINIA and the Technological Institute of Plastics.

Broad international scope

INCLIVA management's recent commitment to internationalize research activity is now bearing fruit. As of 2017 INCLIVA is a partner in several collaborative projects funded by the European Commission under the H2020 program (BIGMEDILYTICS, BODYPASS, MOTRICOLOR, INTRACOLOR), in joint actions (ADVANTAGE, Innovative Partnership on Action against Cancer), in the Innovative Medicines Initiative (BigData@Heart, PainCare), and in cooperative actions with CONACYT-Paraguay and COST Actions, aimed towards helping create thematic networks among

researchers (EPICHEM, MuTaLig or MOUSEAGE). These activities focus on areas such as cardiovascular medicine, personalized, aging, oncology, frailty and big data, with funding of more than **2.5 million euros**. Another success is our researchers' participation in international networks such as the Big Data Value Association (BDVA), the European Infrastructure for Translational Medicine (EATRIS) and the global initiative Networking in Personalized Cancer Medicine (WIN).

Quality in management

Accreditation as a Health Research Institute already certifies the quality of the institution; nonetheless, INCLIVA has opted to implement quality management systems in all areas where certification is appropriate. Thus, in 2017 we obtained the **Quality Certificate in Innovation Management, UNE 166002: 2014**, and previous certificates in management structure - the central medical research unit (UCIM), the Biobank and the Clinical Research Ethics Committee - have all been renewed.

Commitment to Equality

INCLIVA's Equality Plan obtained the quality seal "Doing Business. Equal Opportunities" granted by the Vice Presidency and Ministry of Equality and Inclusive Policies of the Valencian Government. INCLIVA is the first Valencian health research foundation to obtain this seal. Our Equality Plan monitors gender equality compliance in situations such as personnel selection, internal promotion, remuneration, non-sexist language and prevention of harassment.

INCLIVA's current privileged position has been made possible thanks to the efforts of our researchers, 180 of whom are employed directly by the Foundation. Our challenge, however, is to continue generating knowledge and guiding excellence in research for society's benefit: Under the maxim "**integrating talent**" the future couldn't look brighter.

2

INCLIVA
origin and
structure

2.1. History

The *Hospital Clínico Universitario* of Valencia Research Foundation was constituted in the year 2000 as the first Valencian research foundation affiliated to a public hospital. Ten years later, various centers of excellence in biomedical research from the University of Valencia and IUIVI (Valencian Infertility Institute) joined the Foundation through the establishment of specific agreements, and thus INCLIVA Health Research Institute was created.

INCLIVA's main aims are to manage the biomedical research carried out by the *Hospital Clínico Universitario* of Valencia and its Health Department, and to encourage teaching and scientific

activities, thus improving patient treatment and knowledge sharing.

In 2011 INCLIVA was accredited as a Health Research Institute by the Ministry of Science and Innovation (*Ministerio de Ciencia e Innovación*) thus obtaining preferential treatment from the Carlos III Health Institute (*Instituto de Salud Carlos III*), in recognition of its excellence in research.

On March 13, this accreditation as a Health Research Institute was renewed for a further five years.

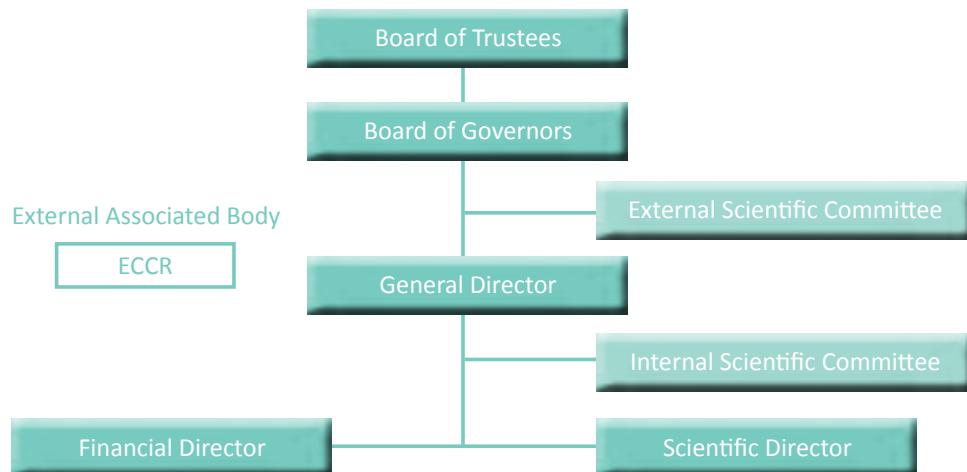

2.2. Organizational structure

2.2.1. Government structure

The highest government body in the Foundation, the Board of Trustees is headed by the Regional Minister for Health of the Valencian Government. This body appoints a Board of Governors –headed by the Chief Executive Officer of the Health De-

partment– the General Director, the Scientific Director and the Financial Director. These are guided by two Research Committees: the External Scientific Committee and the Internal Scientific Committee.

2.2.1.1 Board of Trustees

With a strong representation from the Valencian community, it is the highest collegiate body in the Institute and its function is to establish INCLIVA strategy and policies.

As at December 31st 2017, its members are as follows:

President:

- Ms. Carmen Montón, Regional Minister for Health of the Valencian Government.

Vice-president:

- Mr. Álvaro Bonet, Chief Executive Officer of the *Hospital Clínico Universitario* of Valencia and of the *Valencia Clínico – Málaga* Health Department.

Board members by position:

- Mr. Esteban Morcillo, Distinguished Dean of the University of Valencia.
- Mr. Manuel Broseta, Social Council of the University of Valencia.
- Mr. Juan López-Trigo, Cañada Blanch Foundation.
- Mr. Rafael Alcón, Bancaja Foundation.
- Mr. José Noblejas, Valencia Chamber of Commerce.

- Mr. José Remohí, Scientific Director of the Valencian Infertility Institute.

- Ms. Ana María Ávila, General Director of Research, Innovation, Technology and Quality of the *Consellería de Sanidad Universal y Salud Pública* of the Valencian Government.

- Mr. Narcis Vázquez, Secretary of the *Consellería de Sanidad Universal y Salud Pública* of the Valencian Government.

- Mr. Martín Quirós, Valencian Council for Culture.

- Mr. Federico Pallardó, Distinguished Dean of the Faculty of Medicine.

- Mr. Jesús Fernández Crespo, Carlos III Health Institute.

- Mr. Andrés Cervantes, INCLIVA General Director.

Board members under own name:

- Mr. Carlos Pascual.
- Mr. Joaquín Ortega.
- Mr. Tomás Trenor.
- Mr. Manuel Montánchez.

The Scientific Director and Financial Director participate as nonvoting members.

2.2.1.2 Board of Governors

The Board of Governors executes and enforces the Board of Trustees agreements. Other duties are to prepare and pass activities and research project proposals and to decide on and allocate the budgetary means.

As at December 31st 2017, its members are as follows:

President:

- Dr. Álvaro Bonet, Chief Executive Officer, *Hospital Clínico Universitario* of Valencia.

Vice-president:

- Prof. Federico Pallardó, Most Illustrious Dean of the Faculty of Medicine.

Board members:

- Prof. Andrés Cervantes, INCLIVA General Director.
- Dr. Ana María Ávila. General Director of Research, Innovation, Technology and Quality of the *Consellería de Sanidad Universal y Salud Pública* (universal and public health department) of the Valencian Government.
- Prof. José Remohí, Scientific Director *Instituto Universitario IBI*.
- Prof. Josep Redón, INCLIVA Scientific Director.
- Dr. Jorge Navarro, Medical Director, *Hospital Clínico Universitario* of Valencia.
- Dr. Ana Sanmartín, Director of Primary Health Care, Health Service Department in *Valencia Clínico-Malvarrosa*.
- Prof. Salvador Lluch, Department of Physiology, University of Valencia.
- Dr. Marina Soro, President of the Ethical Committee in Clinical Research (ECCR), *Hospital Clínico Universitario* of Valencia.
- Dr. Manuel Alós Almiñana, Head of the Pharmacy Department, *Hospital Clínico Universitario* of Valencia.
- Dr. Pascual Medina, Coordinator of Research Support Platform (UCIM), University of Valencia.

2.2.1.3 General Director

The most senior person responsible for implementing scientific, economic and administrative policies is the Foundation's General Director.

In May 2017, Professor Rafael Carmena, who had served for the past five years, submitted his resignation and Professor Andrés Cervantes Ruipérez was appointed.

He is Professor of Medicine at the University of Valencia, Head of the Oncology Service of the University Clinical Hospital of Valencia and Director of the Cancer Area at the INCLIVA Health Research Institute. His training as a resident medical intern took place at the *Hospital Clínico Universitario* of Valencia. After completing this residency he obtained a predoctoral fellowship at the Free University Hospital in Amsterdam, where he obtained his Doctorate in the laboratory of cellular pharmacology, with work on multidrug resistance.

His areas of interest and research are gastrointestinal and gynecological cancer, as well as phase I trials and new drug development. As a clinical researcher in rectal cancer, he has published several papers on the quality of multidisciplinary work as well as on evaluating the quality of mesorectal surgery, how to optimize initial therapy choices and especially, how to treat cancer of the upper third of the rectum.

He is President of the Educational Steering Committee of ESMO (European Society of Medical Oncology) and since January 2014 he is also an Associate Editor in the gastrointestinal cancer section of the Annals of Oncology Journal.

2.2.1.4 Scientific Director

The Scientific Director is appointed by government bodies.

In May 2017, Professor Josep Redón, who had served for the past seven years, submitted his resignation, with the Director General Dr. Andrés Cervantes Ruipérez assuming his duties.

2.2.1.5 External Scientific Committee

The External Scientific Committee assesses the collegiate government bodies on research carried out and safeguards the quality of that research.

Its national and international members are appointed by the Board of Trustees, who chooses at least one expert in every INCLIVA priority area of research. It is constituted by well-known professionals renowned within the scientific community.

The composition of the External Scientific Committee as at December 31st 2017 is as follows:

President:

- Prof. Javier Díez. Professor of Medicine, University of Navarra. Director of the Cardiovascular Sciences Area, Applied Medical Research Center (CIMA).

Members:

- Prof. José Baselga. Physician in Chief of the Memorial Sloan-Kettering of New York (U.S.A.). Professor of Medicine, Autonomous University of Barcelona.
- Prof. Nick S. Macklon. Professor in Obstetrics and Gynecology. Division of Developmental Origins of Adult Diseases (DOHaD). University of Southampton. Princess Anne Hospital. Coxford Road, Southampton (United Kingdom).
- Prof. Antonio Vidal-Puig. Professor in Molecular Nutrition and Metabolism. University of Cambridge. Honorary Consultant in Metabolic Medicine. Metabolic research laboratories. Addenbrooke's Hospital, Cambridge (United Kingdom).
- Prof. Josep Tabernero. Chief of Medical Oncology Department. Vall d'Hebrón Hospital, Barcelona.
- Prof. José María Medina. Professor in Biochemistry and Molecular Biology. University of Salamanca. Castilla y León Neuroscience Institute (INCYL).
- Prof. Juan Carlos Lacal. Research Professor in Biomedical Research Institute (CSIC), Madrid.
- Prof. Manuel Tena-Sempere. Professor in Cell Biology, Physiology, and Immunology Department. University of Córdoba.
- Prof. Alberto Zanchetti. Professor Emeritus of Internal Medicine. Università di Milano. Director of the Istituto Auxologico Italiano (Italy). Consultant in WHO.

During 2017, the INCLIVA External Scientific Committee evaluated the entity's research groups, holding several teleconference sessions and a two-day, face-to-face meeting in Valencia on December 13 and 14.

2.2.1.6 Internal Scientific Committee

INCLIVA's Internal Scientific Committee is advisory to the General Director and the Scientific Director, evaluating and supervising the scientific content of the research areas.

As at December 31st 2017, the Committee composition is as follows:

President:

- Dr. Josep Redón i Mas

General Director:

- Dr. Andrés Cervantes Ruipérez

Medical Director of the *Hospital Clínico Universitario* of Valencia:

- Dr. Jorge Navarro Pérez

Priority research area coordinators:

- Dr. Andrés Cervantes Ruipérez
- Dr. José Viña Ribes
- Dr. Carlos Simón Vallés
- Dr. Javier Chorro Gascó

Members:

- Dr. Esteban Morcillo Sánchez
- Dr. Pilar Eroles Asensio
- Dr. Carlos Hermenegildo Caudevilla
- Dr. Ana Lluch Hernández
- Dr. Javier Chaves Martínez
- Dr. Eduardo Otero Coto
- Dr. Daniel Monleón Salvado
- Dr. Gloria Ribas Despuig
- Dr. Nicolás Garrido Puchalt
- Dr. Carlos Estella Sagrado
- Dr. Carlos Solano
- Dr. Rosa Zaragozá
- Dr. Fernando Martínez García
- Dr. Federico Pallardó Calatayud

2.2.1.7 Clinical Research Ethics Committee

The Clinical Research Ethics Committee (ECCR) of the *Hospital Clínico Universitario* of Valencia is an independent body tasked with safeguarding the rights, security and welfare of subjects taking part in a clinical trial or research project.

Among others tasks, this Committee assesses protocol, the aptitude of the participating researchers, the adequacy of the center's facilities, and ensures the use and quality of the Patients

Fact Sheet in order to assure informed consent.

The members of the ECCR in the *Hospital Clínico Universitario* of Valencia, as at December 31st 2017, are as follows:

President:

- Dr. Marina Soro Domingo. Head of Section of the Anesthesiology and Reanimation Unit.

Vice-president:

- Dr. Cristina Gomis Gozalbo. Specialist of the Gynecology Department.

Secretary:

- Mr. Diego V. Cano Blanquer. Pharmacist.

Substitute Secretary:

- Ms. Mª José Tarín Blasco. Graduate in Law.

Members:

- Dr. José Álvaro Bonet Pla. Hospital Chief Executive Officer.
- Dr. Jorge Navarro Pérez. Medical Director of the *Hospital Clínico Universitario* of Valencia.
- Prof. Esteban Morcillo Sánchez. Dean of the University of Valencia. Professor of Pharmacology.
- Prof. Miguel Minguez Pérez. Head of Section of Gastroenterology Department.
- Prof. Andrés Cervantes Ruipérez. Head of Oncology Department.
- Dr. Ricardo Ruiz Granell. Head of Section of Cardiac stimulation Department.
- Dr. Julio Palmero Da Cruz. Head of Radiology Department.
- Prof. Joaquín Ortega Serrano. Head of General Surgery Department.
- Dr. Mª Jesús Puchades Montesa. Specialist of Nephrology Department.
- Dr. Mª José Fabiá Valls. Specialist of Internal Medicine Department.
- Dr. Luis González Luján. Specialist in Primary Health Care.
- Dr. Patricia Roselló Millet. Specialist of Pediatrics Department.
- Dr. Rafael Fernández-Delgado. Pediatrics Specialist.
- Ms. Mª Ángeles Mora Plà. Nurse.
- Ms. Almudena Amaya Rubio. Nurse

- Dr. Manuel Alós Almiñana. Head of Pharmacy Department.
- Dr. José Luis Trillo Mata. Primary Health Care Pharmaceutics.
- Dr. Antonio Peláez Hernández. Allergy Specialist.
- Dr. Francisco Dasí Fernández. Established Miguel Servet Researcher.
- Ms. Dolores Iglesias Ferri. Pharmacist

2.2.2. Management structure

The organizational chart is comprised of two sub-directorates, economic and scientific, as well as a new area of innovation within the latter sub-directorate.

The first sub-directorate is in charge of the administrative area, which deals with the financial and administrative matters as well as with human resource management.

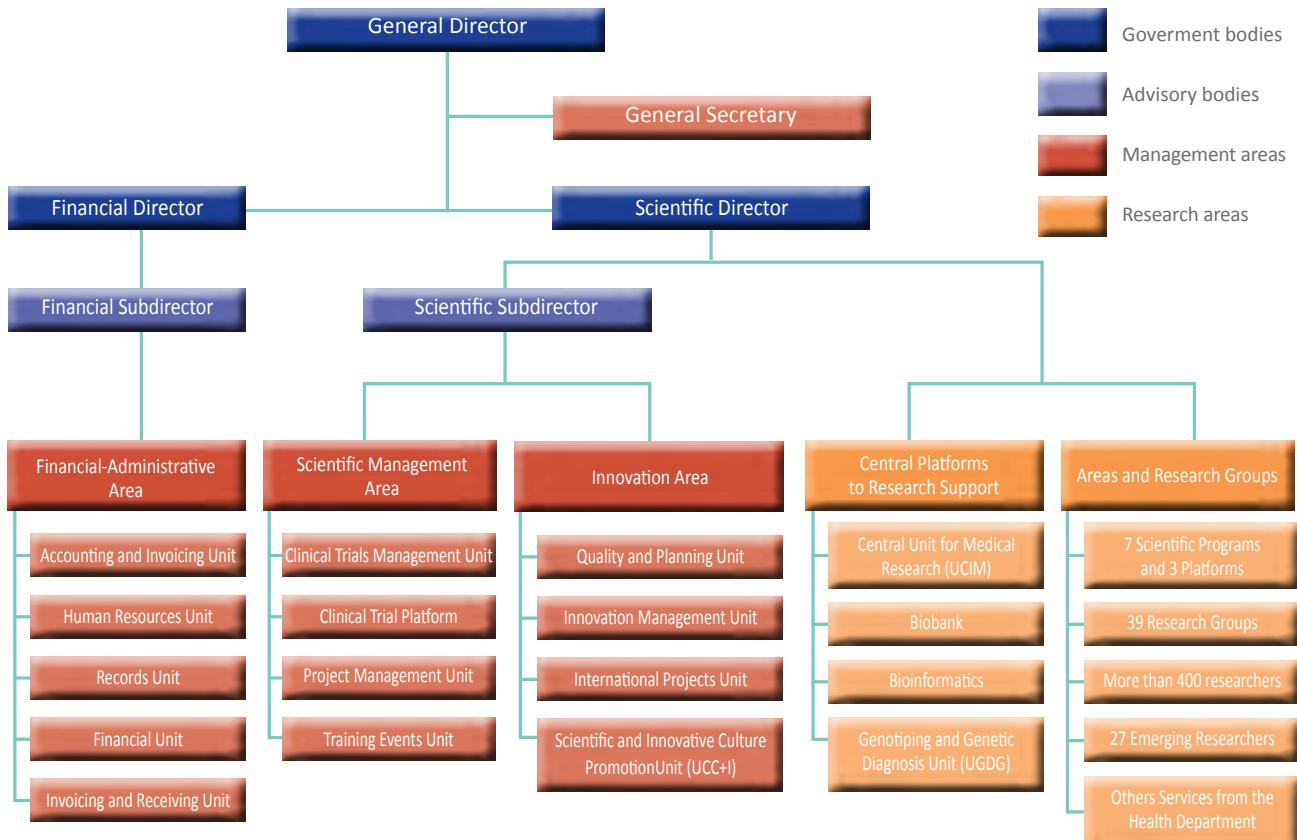

The second is in charge of scientific activity management and innovation. It is responsible for integral scientific management that includes controlling and monitoring clinical trials and research projects, organizing courses, conferences and seminars, and several tasks related to general administration. Furthermore, it acts as an administrative support to the different affiliated scientific committees and to the Medical Research Central Unit. Finally, it comprises the new innovation area in charge of quality and planning, innovation management, international programs and scientific and innovative culture promotion (UCCI).

Administrative Area:

- Financial-Administrative Director: Mr. Vicente de Juan
- Financial-Administrative Subdirector: Ms. Consuelo López
- Accounting and Invoicing Unit: Ms. Mª José Rosalén
- Financial Unit: Ms. Consuelo López and Ms. Karen Iglesias
- Invoicing and Receiving Unit: Ms. Vera Marín
- Records Unit: Ms. Alicia Belenguer
- Purchasing Unit: Ms. Isabel Gomis
- Human Resources Unit: Ms. Ruth Cano and Ms. Anabel Gil
- Receptionists: Ms. Carmen Montagud, Mr. Julio Expósito

Scientific Management Area:

- Scientific Subdirector: Dr. Marta Peiró

- Projects Unit: Ms. Mayca Román, Ms. Noemí Hidalgo and Mr. Bernat Navarro
- Clinical Trials Management Unit: Ms. Dolores Iglesias, Mr. Roberto Martínez and Ms. Maialen Llopis
- Clinical Trials Platform: Ms. Ana Portolés, Ms. Laura Silla, Ms. Mireia Hernández, Mr. Bernat Navarro

Innovation Area:

- Coordination: Dr. Enrique Cremades
- Quality and Planning Unit: Mr. Rafael Barajas
- Innovation Management Unit: Dr. Pedro Fernández
- International projects: Dr. Ana Ferrer, Dr. Javier Gámez
- OPESVAL: Dr. Javier Gámez
- Scientific and innovative culture promotion (UCCI): Ms. Clara Badenas, Mr. Justo Giner

Secretary General:

- Head: Ms. Maite Saenz
- Technician: Ms. Lorena Munuera

2.3 Core facilities

In 2004 INCLIVA and the Central Service for Experimental Research Support (SCIE) of the University of Valencia signed a collaboration agreement aimed at enhancing cooperation between both institutions, with special emphasis on research projects and collective research activities. It gives Hospital Clínico Universitario de Valencia research staff access to and use of the Central Unit for Medical Research facilities as well as research stay opportunities.

The Central Unit for Medical Research (UCIM) was created thanks to FEDER funds in 1990. From its inception, it has received several grants from both University of Valencia and INCLIVA funds, as well as from external funds (Comisión Interministerial de Ciencia y Tecnología, Generalitat Valenciana and Fondo de Investigaciones Sanitarias).

In addition to these support units, INCLIVA has four additional platforms: the Biobank, the Genotyping and genetic diagnosis unit, the Cytogenetics lab and the Bioinformatics unit. The latter was created as such in 2013, through a Carlos III Health Institute (Instituto de Salud Carlos III) PROMIIS grant program to improve infrastructures.

These laboratories are supported by several research technicians and technical assistants included in the organization's structure thanks to diverse public grants or directly from the University budget.

The research support platforms are:

- Cell Culture Unit
- Flow Cytometric Unit
- Multigenic Analysis Unit
- Confocal Microscopy Unit
- Sequenom Platform
- Laboratory of Molecular Imaging and Metabolomics

- Animal Housing and Experimental Operating Theaters Unit
- Proteomics Unit
- Small Animals PET/CT Camera and Laboratory for Radioactive Isotopes
- Personal Autonomy, Dependence and Severe Mental Disorders Assessment Unit

INCLIVA Platforms are:

- Biobank
- Bioinformatics Unit
- Genotyping and Genetic Diagnosis Unit
- Cytogenetics Laboratory

3

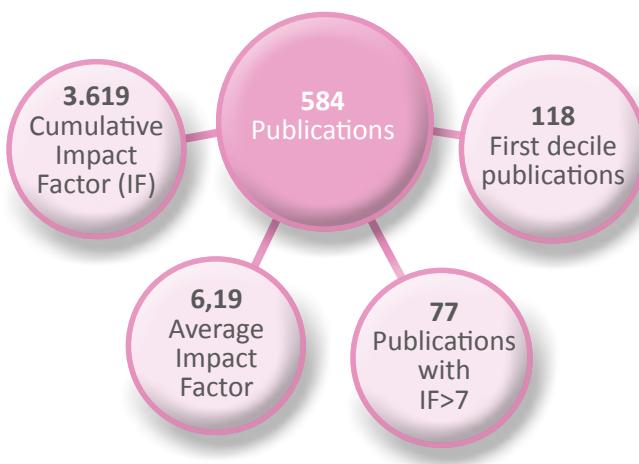

INCLIVA
global
analysis

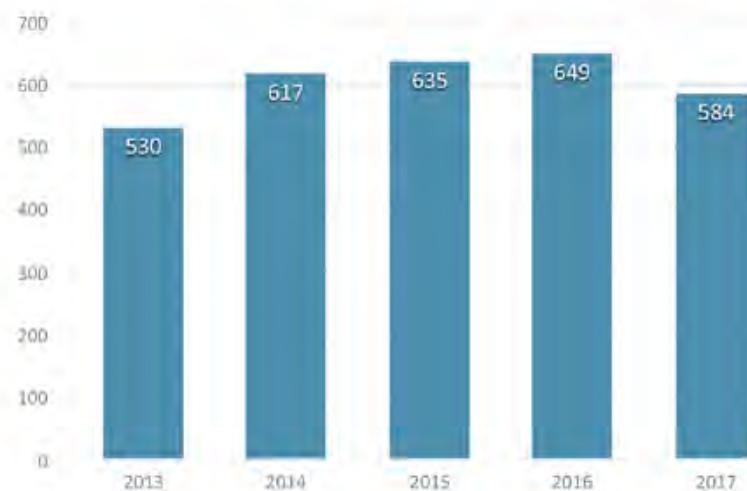

3.1 Scientific output - global analysis

As in previous years, in 2017 INCLIVA continued an upward trend in quality of scientific output. Although the number of publications is lower than the previous year, the cumulative impact factor has increased (2.932 to 3.618), which translates into an average impact factor greater than in 2016 (4,51 to 6,19). This shows that despite being smaller in number, the publications are of higher quality. The number of works indexed in the Medline database reached 584 in 2017.

To show this trend, the following figures depict the number and quality of the published manuscripts expressed in terms of total and average impact factor.

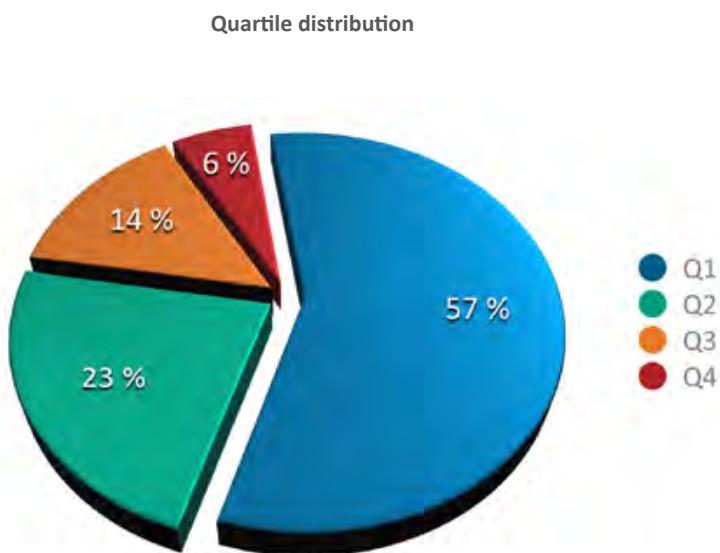

Publications indexed

Cumulative impact factor

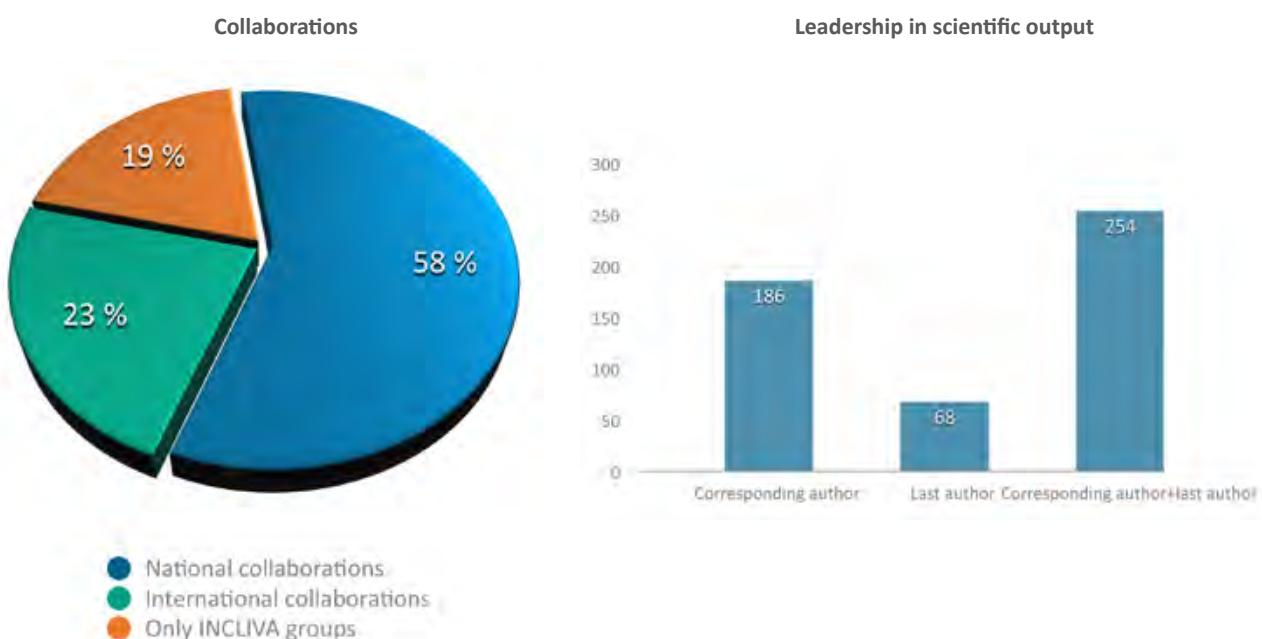

The distribution by quartiles within their thematic categories is shown below. In 2017, 80% of the papers that were published in indexed journals belong to the first and second quartiles of their corresponding thematic categories:

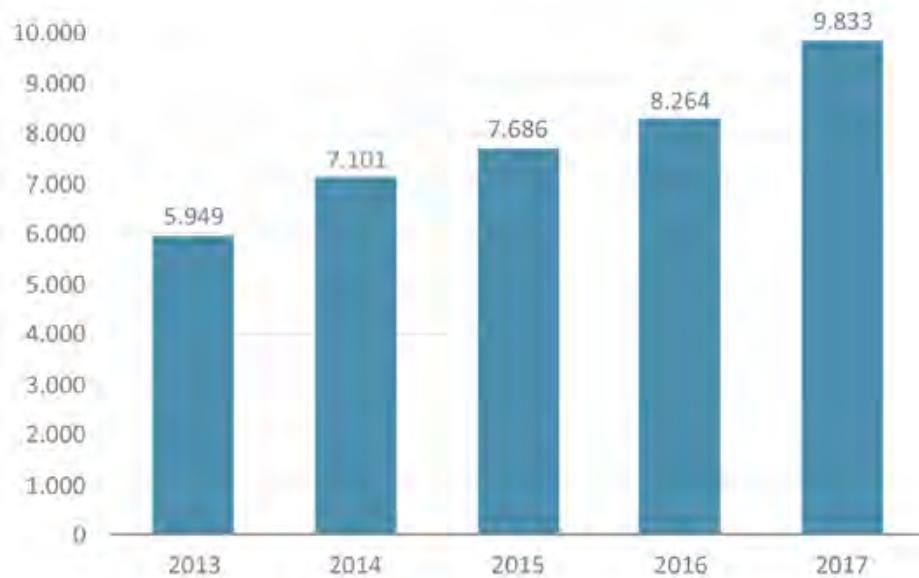

One of the main success factors for a biomedical research institution is its potential to establish high-level scientific collaborations. The percentage of national and international collaborations which led to scientific output in 2017 is listed below.

Another key performance indicator is the leadership role in scientific publications. The chart below shows the number of published articles in which INCLIVA researchers sign as last author, corresponding author or both at the same time.

3.2. Financial resources

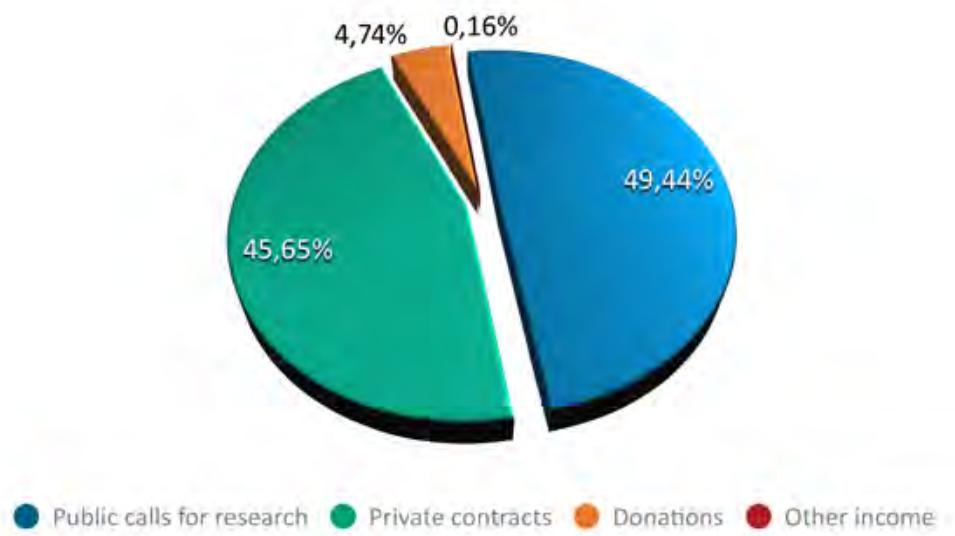

INCLIVA's funding during 2017 totaled 9.832.908€. The funds raised from competitive sources continued to be higher than the average in recent years.

Funding source in the indicated period is shown below.

The remaining income corresponds to private sources of funding, clinical trial revenues and grants, among others. The graph below shows the distribution in 2017.

3.2.2 Knowledge transfer to the National Health System

One of INCLIVA's foundational aims is transferring research to society. Given a medical need, researchers and clinicians use their knowledge to come up with ideas that can be transformed through research and development into real products or processes that overcome the existing problem.

INCLIVA's Innovation Unit supports this process by detecting ideas, assessing them and paving the way for their transformation into real products or services that can be transferred to society (normally to the market). This track is known as the innovation funnel because it starts with a broad range of ideas and gradually refines and selects from among them, creating a handful of formal development projects that can be pushed to completion and transfer.

Plot of the INCLIVA innovation funnel in 2017

	Detection	Assessment	Development	Transfer	Market
Organizational	4	0	0	0	0
ITC	3	2	0	0	0
Device	5	1	0	1	0
Imaging	3	0	1	0	0
Pharma	4	1	1	1	0
Bio	23	4	2	1	4
Total	42	8	4	3	4

3.2.3 Intellectual Assets

Knowledge protection is the first step to move scientific findings and ideas from researchers to industry and the most common way to protect new, inventive technologies that have industrial application are with patents. Research institutions can exploit the patents they hold by licensing them to companies. The following intellectual assets have been registered during 2017:

Patent applications

Title: Easy one-step amplification and labeling (EOSAL)

Inventors: Chaves FJ, Blesa S, Ivorra C, Olivares MD

Applicant: INCLIVA, Seqplexing Multiplex SL

Application number: EP17382141.4

Priority Date: 2017/03/21

Territory: Europe.

Title: P15/P16 Agonists

Inventors: González Navarro H, Martínez Hervás S, Vinué Visús MA

Applicant: INCLIVA

Application number: EP17382251.1

Priority Date: 2017/05/05

Territory: Europe.

Title: Benzopiranos prenilados agonistas de PPAR

Inventors: Cortés D, Sanz MJ, Cabedo N, Bermejo A, Piquera L, Collado A, Gomes P

Applicant: INCLIVA, UV

Application number: P201731470

Priority Date: 2017/12/26

Territory: Spain.

Software

Title: Cardiac Extracellular Volume CARECVV1

Authors: Bodí V, Gavara J, Moratal D, Monemeneu JV

Applicant: INCLIVA, UV, UPV, ERESA

Registration number: 35444

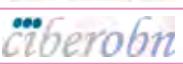

Priority Date: 2017/03/27

3.3 Cooperative research networks

Through the Sub directorate-General of Networks and Centers for Cooperative Research, Carlos III Health Institute (*Instituto de Salud Carlos III*) facilitates the creation of stable research network structures such as *RETICS* (Thematic Networks of Cooperative Research) and *CIBER* (Network of Centers for Biomedical Research). INCLIVA participates in many of these research structures through its associated groups.

The following table shows participation in scientific networks according to the prioritized research area, the center and its principal investigator (PI).

CIBER

Research Area	INCLIVA PI	Scientific Network	Reference
Cardiovascular	Juan Francisco Ascaso Gimilio	CIBERdem	 CB07/08/0018
	Empar Lurbe i Ferrer	CIBERRobn	 CB06/03/0039

3.4 Knowledge transfer activities

As part of its organizational mission INCLIVA Health Research Institute is fully committed to knowledge transfer, both to the National Health System and to industry.

3.4.1 Knowledge transfer to the National Health System

Clinical guidelines and consensus documents are one of the best indicators of knowledge transfer from research to clinical

practice. The following table shows guidelines published in indexed journals with participation from authors affiliated to INCLIVA.

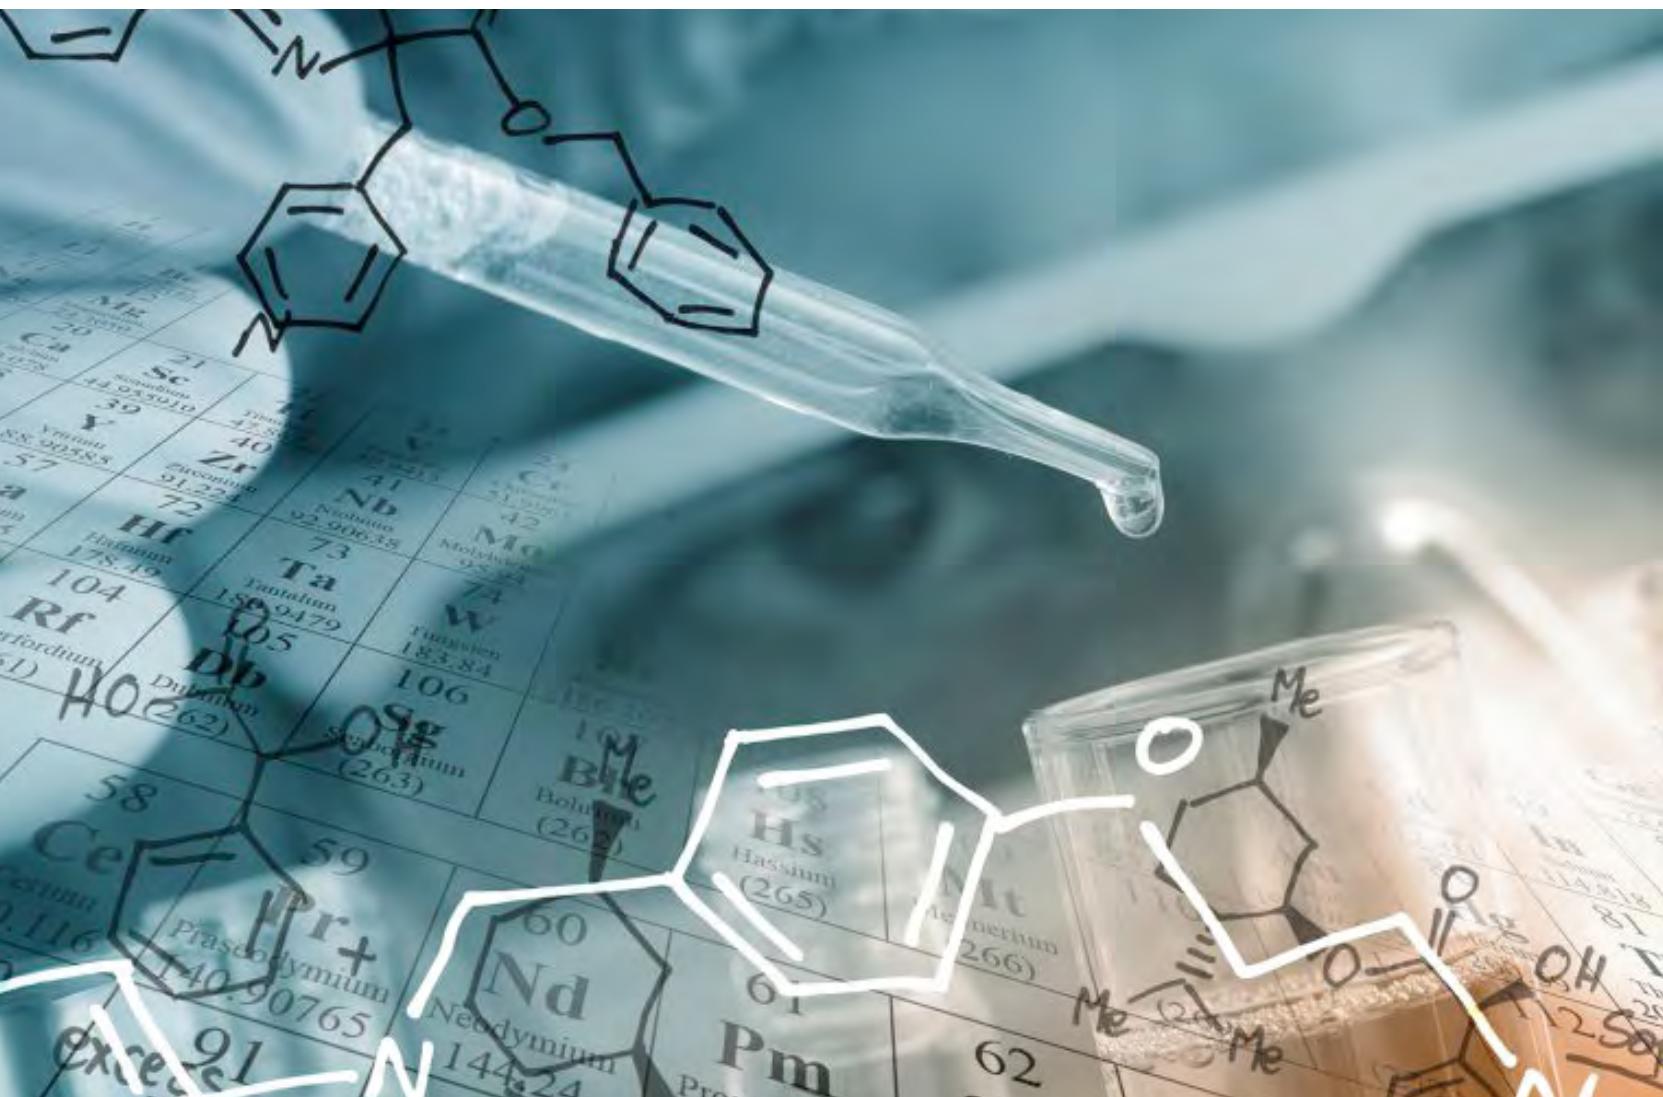

Clinical guidelines	FI
4	4.45

1. Pedrón Giner C, Cuervas-Mons Vendrell M, Galera Martínez R, Gómez López L, Gomis Muñoz P, Irastorza Terradillos I, Martínez Costa C, Moreno Villares JM, Pérez-Portabella Maristany C, Pozas Del Río MÁT, Redecillas Ferreiro SE, Prieto Bozano G, Grupo de Estandarización de la Senpe S. Scientific
activity

• 4.1 Scientific structure

INCLIVA articulates its research in 4 areas of research, 7 scientific programs and 3 platforms.

Areas of research constitute the basis on which to articulate the scientific work of the groups:

- Research area in oncology.
- Research area in cardiovascular.
- Research area in metabolism and organ damage.
- Research area in reproductive medicine.

Scientific programs are aimed at specific diseases from a translational perspective:

- Program in overweight and cardiovascular and renal risk.
- Program in myocardial ischemic damage.
- Program in rare diseases.
- Program in neurological impairment.
- Program in translational oncology.
- Program in reproductive medicine.
- Program in aging and its associated diseases.

Platforms are based on the provision of research services to the whole institute:

- Inflammation platform.
- Metabolomics platform.
- Genomics, epigenomics and transcriptomics platform.

• 4.2 Scientific translational programs

• 4.2.1 Overweight and cardiovascular and renal risk

Obesity and overweight is a field in which new strategies are developed both for prevention and treatment with the use of traditional resources and the new technologies. The present program is focused on the study of pathology on the first stages of obesity (overweight with or without metabolic syndrome) integrating different clinical and experimental research studies.

Coordinators:

Juan F. Ascaso and Josep Redón

INCLIVA research groups involved

Clinical groups:

- Research Group on the Study of Cardiometabolic and Renal Risk (Dr. Redón)
- Research Group on Cardiometabolic Risk (Dr. Ascaso)
- Research Group on the Study of Cardiovascular Risk in Children and Adolescents (Dr. Lurbe)
- Translational Research Group on Nutrition and Metabolism (Dr. Hernández)
- Cardiometabolic Research Group on Primary Care (Dr. Navarro)

Experimental groups:

- Research Group of the Genotyping and Genetic Diagnosis Unit (UGDG) (Dr. Chaves)
- Research Group on Endothelial Cells (Dr. Hermenegildo)
- Research Group on Inflammation (Dr. Morcillo y Dr. Sanz)
- Research Group on Molecular Imaging and Metabolomics (Dr. Monleón)

Objectives

- To deepen in the early alterations, mechanisms and biomarkers that contribute to the development of obesity, vascular and renal alterations as a complication, from its fetal, biological, genetic and environmental origins.
- To know potential signaling pathways susceptible to be therapeutic targets.
- Early application of new technologies for the prevention and treatment of obesity and vascular and renal alterations in overweight subjects.

Research lines

- To identify early vascular and renal changes in overweight subjects and in animal models.
- To study the state, mechanisms of vascular inflammation and endothelial injury in overweight and animal models.
- To analyze the relationship of “-omic” markers (genomic, epigenetic and metabolomic) with obesity and vascular and renal alterations in overweight and animal models.
- Interaction of biomarkers (biological, genomic and metabolic) and intervention in progression to obesity and vascular and renal complications.

• 4.2.2 Myocardial ischemic damage

The program focuses on the study of the pathophysiological mechanisms involved in myocardial ischemic damage, on its structural, functional and electrophysiological repercussions on the evaluation of diagnostic tools and markers and prognoses and on the study of new therapeutic approaches that may help to prevent their adverse consequences.

It is a truly and translational research program that capitalizes the synergies between clinical and experimental research groups and also includes specialists in cardiac imaging techniques and technological development experts. The multidisciplinary approach extends the possibilities of collaboration between groups, strengthens those already existing and incorporates other groups into the activities of the program. Innovation through the development of analytical tools (imaging techniques such as cardiac magnetic resonance, cardiac electrical signals or cartographic techniques), allows the generalize of patents in the field of technological development.

Coordinator:

Francisco Javier Chorro Gascó

INCLIVA research groups involved

Clinical groups:

- Research Group on Clinical Cardiology (Dr. Sanchis, Dr. Nuñez)
- Group on Translational Research in Ischemic Heart Disease (Dr. Bodí)
- Research Group on Cardiac Experimental Electrophysiology (Dr. Chorro)

Experimental groups:

- Research Group on Aging and Physical Activity (Dr. José Viña)
- Research Group on Tissular Biochemistry (Dr. Juan Viña)
- Research Group on Inflammation (Dr. Morcillo and Dr. Sanz)
- Research Group on Endothelial Cells (Dr. Hermenegildo)
- Research Group on Molecular Imaging and Metabolomics (Dr. Monleón)

Others groups involved

Universidad Politécnica de Valencia (Prof. D. Moratal, Prof. J. Millet), H. Clinic Barcelona (Dr. Ortiz), Heart Center Munich (Dr. Husser), ERESA (Dr. López), Universitat de Valencia, Fac. Físicas (Prof. J. Guerrero), Center for Arrhythmia Research (University of Michigan, Prof. Jalife), School of Engineering (Univ. of California, Prof. Escobar)

Objectives

- Study of the pathophysiological mechanisms involved in myocardial ischemic damage and its structural, functional and electrophysiological repercussions.
- Evaluation of diagnostic and prognostic tools and markers.
- Evaluation of new therapeutic approaches.
- Study of the role played by: a) oxidative stress and its modifications in post-infarction damage; b) the vascular endothelial growth factor VEGF-A165b in microvascular obstruction, the deterioration of systolic function in the neoangiogenesis.
- Development of new diagnostic tools in cardiac magnetic resonance (MRI) for the detection of damage associated with ischemia / reperfusion and fibrosis.

- Evaluation of new prognostic and functional biomarkers in myocardial infarction from MRI, maximal O₂ consumption, metabolomics and the combined use of CA125, galectin-1 and galectin 3.
- Development and analysis of preventive measures against the adverse consequences of postinfarction damage (remodeling, heart failure, arrhythmias).

Research lines

- Clinical research: acute coronary syndromes, interventional cardiology, ventricular remodeling and heart failure.
- Translational research: regulation of post-infarction fibrosis; development of innovative tools for their characterization by MR after an infarct and study of new therapeutic approaches.
- Experimental study of arrhythmogenesis in the context of ischemia and myocardial damage. Influence of the substrate and the modulating mechanisms.
- Microimaging using RM. Metabolomics.
- Research of textures using RM.
- Analysis, using molecular biology and biochemical techniques of circulating metabolic factors associated with ischemic damage.
- Endothelial dysfunction.
- Microvascular obstruction.

• 4.2.3 Rare diseases

The main objectives of the program is to improve diagnosis and current treatments of rare diseases. To this end, we will proceed to identify and validate rare disease biomarkers for which we do not have effective diagnostic and / or prognostic indicators. On the other hand, new therapeutic strategies will be developed for the treatment of these diseases. Human and animal model samples will be used to understand the molecular basis of disease, to evaluate the activity of candidate drugs and to discover new biomarkers.

Basically, the program seeks to fill the gap between basic research and commercial development of diagnostic systems and treatments, so its aim is to transfer this knowledge to companies, in order to transform biomedical knowledge into products and services that improve the human health. With this objective contacts with biotechnology and pharmaceutical companies have been established. On the other hand, the program aims to disseminate its findings to society in order to get feedback about actual patients' needs.

Coordinator:

Federico Pallardó and Francisco Dasí

INCLIVA research groups involved

Clinical groups:

- Research Group on Respiratory Problems in Neuromuscular Diseases (Dr. Servera)

Experimental groups:

- Research Group on Cellular and Organic Physiopathology of Oxidative Stress (Dr. Pallardó)
- Research Group on Molecular Imaging and Metabolomics (Dr. Monleón)
- Research Group on Neurological Impairment (Dr. Montoliu)

- Research Group on Translational Genomics (Dr. Artero)

Objectives

- To improve diagnosis and current treatment of rare diseases.
- Identification and validation of rare diseases biomarkers for which, nowadays, no effective diagnostic and / or prognostic indicators are available.
- Development of new therapeutic strategies.

Research lines

- Study of the oxidative profile in rare diseases.
- Pathophysiology of alpha-1 antitrypsin deficiency and Primary Ciliary Dyskinesia Syndrome.
- Gene therapy for the treatment of rare respiratory diseases.
- Design and testing of new biomarkers and experimental treatments in animal models.
- Study by exploratory and directed metabolomics of altered metabolic clusters in rare diseases.

• 4.2.4 Neurological impairment

Inflammation, which is associated with many chronic diseases (diabetes, liver cirrhosis, etc.), aging or major surgeries, leads to neuroinflammation and brain alterations that eventually lead to cognitive and functional impairment. This deterioration reduces the quality of life and increases the risk of accidents, falls, fractures and adverse consequences, which implies an increase in hospitalizations and the use of public resources.

Cognitive and functional impairment associated with aging and many chronic diseases is one of the most important challenges in order to improve the quality of life of the population and secure the sustainability of health systems. Early detection and treatment and prevention of cognitive and functional impairment would improve the quality of life of the elderly or with chronic diseases and reduce the demand for resources to the health system, improving its sustainability. Therefore, it is necessary to design new approaches to address these challenges, based on advances in knowledge on mechanisms, early diagnosis, prevention and treatment of cognitive and functional impairment.

Coordinator:

Carmina Montoliu and Vicente Felipo

INCLIVA research groups involved

Clinical groups:

- Research Group on the Study of Cardiometabolic and Renal Risk (Dr. Redón)
- Research Group on Cardiometabolic Risk (Dr. Ascaso)
- Research Group on Anesthesiology and Reanimation (Dr. Belda)

Experimental groups:

- Research Group on Neurological Impairment (Dr. Montoliu)
- Research Group on Inflammation (Dr. Morcillo and Dr. Sanz)
- Research Group on Aging and Physical Activity (Dr. José Viña)

- Research Group on Personal Autonomy, Dependence and Severe Mental Disorders (TMAP) (Dr. Tabarés)

Others groups involved

IPPC Neurobiology Research Group (Dr. Felipo), Cognitive Social Neuroscience Research Group from UV (Dr. Salvador), Hospital Neurorehabilitation Service NISA (Dr. Noe)

Objectives

- To characterize the alterations in inflammation, neuroinflammation, neurotransmission, brain function and structure associated with the appearance of cognitive and functional impairment.
- To characterize in detail the cognitive and functional alterations.
- To identify biomarkers for the early detection of cognitive and functional impairment.
- To identify the mechanisms by which: a) peripheral inflammation leads to neuroinflammation; b) neuroinflammation leads to functional, structural and neurotransmission alterations in the brain; c) changes in the brain lead to cognitive and functional impairment.
- To identify therapeutic targets to reverse or prevent cognitive and functional impairment.
- To design and test new therapeutic procedures to reverse or prevent cognitive and functional impairment.

Research lines

- Characterization of cognitive and functional alterations.
- Cognitive impairment in diabetes.
- Cognitive impairment for major surgeries and anesthesia.
- Alzheimer's and mild cognitive impairment.
- Cognitive and functional impairment in hyperammonemia and hepatic diseases.

• 4.2.5 Translational oncology

The translational oncology program called "Identification of oncogenic biomarkers: mechanisms and clinical implications, detection in non-invasive samples, omics analysis" tries to apply to the clinical practice the genomic screening in patients tumors.

Its main objective is to evaluate the dynamics of the disease through non-invasive biopsies in order to detect minimal residual disease, early onset of markers after surgery and patient response to different treatments.

The high heterogeneity of cancer results in inefficiency of treatments, even when they are directed against specific molecular targets. The low availability of tumor specimens makes genomic studies difficult.

In this sense, the use of liquid biopsies would facilitate the serial collection of samples to carry out molecular analysis and would guarantee a minimum risk for the patient. Thus improving the follow-up and allowing a dynamic understanding of the evolution of the genomic parameters of the patient.

This point of view benefits the National Health System as a whole since it allows the application of more specific treatments to patients, thus avoiding those that would have been less effective, reducing hospitalization and improving life expectancy and quality thereof. It could also prevent generalized treatments, secondary toxicities and rapid treatment adequacy responses.

Finally, it would improve the inclusion of patients in clinical trials which are stratified by molecular mutations.

**Coordinator:**

Andrés Cervantes

INCLIVA research groups involved

Clinical groups:

- Research Group on Colorectal Cancer and New Therapeutical Developments in Solid Tumours (Dr. Cervantes)
- Research Group on Breast Cancer Biology (Dr. Lluch)
- Translational Research Group on Pediatric Solid Tumours (Dr. Navarro)

Experimental groups:

- Research Group of the Genotyping and Genetic Diagnosis Unit (UGDG) (Dr. Chaves)
- Research Group on Cellular and Organic Physiopathology of Oxidative Stress (Dr. Pallardó)

Objectives

- To obtain a large database of genetic material (viable cells, DNA, RNA, serum / plasma) from tumors (solid and haematological). Implementing the clinical database for data management and data crossing. (Hospital, biobank, PROS-UPV).
- Molecular characterization of tumor biopsies using high throughput platforms (Sequenom, NGS).
- To improve inclusion of patients in clinical trials.
- To establish a routine for obtaining liquid biopsies in order to evaluate the detection of biomarkers as disease follow-up, minimal residual disease, early onset and response to treatment. (biobank, BEAMing PCR, NGS).
- To develop functional assays (modified cell lines, patient cell lines, xenografts) to evaluate mechanisms of disease.
- Incorporation of molecular results into clinical decision making.

Research lines

- Development of new therapeutic agents through Phase I clinical trials (first-in-human).
- Development of non-invasive early diagnostic methods and monitoring of therapeutic effects.
- Application of methodologies for clinical and molecular characterization of solid tumors and response to treatment (analysis of gene expression profiles, microRNAs, methylation).
- Translational studies for the identification of mechanisms of resistance to targeted therapies.

• 4.2.6 Reproductive medicine

This program comprises two main lines:

1. Role of maternal miRNAs in the transmission of obesity and type 2 diabetes to the embryo:

Obesity and type 2 diabetes are increasingly important public health problems whose prevalence cannot be explained only by genetic and / or environmental factors, so the hypothesis of the program lies in the existence of an embryonic epigenetic regulation of maternal origin in these diseases. Preliminary data reveals that miRNAs secreted by the maternal endometrium to the endometrial fluid are internalized by the embryo, leading to a transcriptional and functionally modification and increasing its adhesion to the endometrium during its implantation. In this sense, the program goal is to explore if this new epigenetic

mechanism of maternal origin could explain the origin of the development of certain adult-onset diseases such as obesity and type 2 diabetes.

2. Study of adult stem cells in human endometrium:

Use of autologous bone marrow stem cells by prior mobilization and collection of Peripheral Blood Progenitor Cells (PPSCs) and subsequent apheresis and transplantation of these cells in order to regenerate the endometrium de novo in patients undergoing assisted reproductive therapy (ART). The results of this study would allow a new therapeutic approach for the treatment of Asherman's Syndrome and endometrial atrophy, which currently lack of specific treatment.

Coordinator:

Carlos Simón

INCLIVA research groups involved

Clinical groups:

- Translational Research Group on Nutrition and Metabolism (Dr. Hernández)
- Research Group on Hematopoietic Transplantation (Dr. Solano)
- Research Group on Women Health (Dr. Cano)
- Research Group on the Study of Cardiovascular Risk in Children and Adolescents (Dr. Lurbe)

Experimental groups:

- Research Group on Stem Cells Applied to Reproduction, Embryo Viability and Endometrial Receptivity (Dr. Simón)
- Research Group on Male Infertility and Ovarian Stimulation (Dr. Remohí)

Objectives

- To advance in the understanding of the mechanisms that regulate maternal-fetal communication and that may be involved in the implantation of the embryo in the maternal uterus and to be able to understand the embryonic / fetal origin of adult diseases such as obesity and type II diabetes.
- To regenerate uterine function in patients suffering from endometrial atrophy and / or Asherman's Syndrome through cell therapy.
- The creation of an in vitro model to obtain germ cells by direct reprogramming of human somatic cells.

Research lines

- Role of maternal miRNAs in the transmission of obesity and type 2 diabetes to the embryo.
- Use of autologous bone marrow stem cells in order to regenerate the endometrium in patients with Asherman Syndrome and endometrial atrophy undergoing assisted reproductive therapy (ART).
- Identification of the main regulating genes of the development of the germinal line in humans, as well as of the experimental conditions that allow obtaining of germinal cells in vitro.

• 4.2.7 Aging and its associated diseases

This program has the priority of improving the quality of life of the elderly and promoting longevity as much as possible. Aging population it's a challenge for current health systems since the population over 65 years old contributes, in a very significant percentage, to health expenditure. As life expectancy increases, so do the diseases associated with aging.

In this context, the concept of "healthspan" (quality of life) has emerged. The program is formed by many researchers and health professionals who consider that efforts to extend life at the expense of causing a severe physical or psychic disability are undesirable and, on the contrary, they should focus on lengthening the part of life during which we are able to maintain autonomy, independence, productivity and well-being.

A central guiding idea in this program is that people who achieve exceptional longevity (i.e. centenarians) serve as a model of satisfactory aging. On the other hand, it is considered that the most problematic expression of the population aging is the clinical condition of the frailty since an important part of the collective of older people presents criteria of frailty. Approximately onefourth of people over the age of 85 are estimated to be fragile. Frailty is a geriatric syndrome characterized by increased vulnerability to external aggressions as a result of an alteration in the physiological reserves of multiple systems, leading to difficulties in maintaining homeostasis. The program tries to identify specific molecular targets to be able to intervene in a concrete and rational way to improve the quality of life of the elderly.

For this, INCLIVA has an enormous advantage because of the great integration that exists, by proximity and interests, between the *Hospital Clínico Universitario de Valencia* and the Faculty of Medicine of the University of Valencia. This framework allows intense collaboration between basic research groups, that develop possible biomarkers associated with healthy aging, frailty or diseases associated with aging and clinical research groups that, on the one hand, provide samples of the subjects and, on the other hand, can transfer to the patient those results that have been interesting at the bench.

In addition to this, in INCLIVA has registered the first and only Spanish Group for the Study of Centenaries, which has research groups working in this field distributed in different Spanish communities.

Coordinator:

José Viña

INCLIVA research groups involved

Clinical groups:

- Research Group on the Study of Cardiometabolic and Renal Risk (Dr. Redón)
- Research Group on Oxidative Pathology (Dr. Sáez)
- Cardiometabolic Research Group on Primary Care (Dr. Navarro)
- Research Group on Clinical Cardiology (Dr. Sanchís)
- Research Group on Women Health (Dr. Cano)
- Group on Translational Research in Ischemic Heart Disease (Dr. Bodí)

Experimental groups:

- Research Group on Aging and Physical Activity (Dr. José Viña)
- Research Group on Inflammation (Dr. Morcillo and Dr. Sanz)
- Research Group on Genetics of Osteoporosis (Dr. García)
- Research Group on neurological impairment (Dr. Montoliu)

- Research Group on Endothelial Cells (Dr. Hermenegildo)
- Research Group on Cellular and Organic Physiopathology of Oxidative Stress (Dr. Pallardó)

Objectives

- Determination of parameters of oxidative stress and inflammation associated with healthy aging, frailty and diseases associated with healthy aging, frailty and others associated diseases (mainly cardiovascular and neurodegenerative).
- Determination of genetic biomarkers (microRNAs, mRNAs and SNPs) associated with healthy aging and frailty and others associated diseases (mainly cardiovascular and neurodegenerative).
- Determination of epigenetic biomarkers associated with healthy aging, frailty and others associated diseases (mainly cardiovascular and neurodegenerative).
- Determination of metabolic biomarkers associated with healthy aging, frailty and others associated diseases (mainly cardiovascular and neurodegenerative).
- Physical exercise protocols for the prevention of frailty and others associated diseases.
- Impairment of other biomarkers associated with healthy aging, frailty and others associated diseases.

Research lines

- Oxidative stress, associated inflammation and healthy aging.
- Genetics and healthy aging.
- Epigenetics and healthy aging.
- Metabolomics and healthy aging.
- Exercise and healthy aging.

• 4.3. Research areas

INCLIVA Health Research Institute has four research areas in order to organize its scientific activity. Despite their independence, they have a common objective: meeting health needs and improving R&D&i system.

Their main aim is to establish a common reference framework to promote collaboration between INCLIVA attached researchers.

Each of the lines counts on the participation of one or several advisers from the External Scientific Committee. These lines are led by the following coordinators:

Cardiovascular Area

- Coordinator: Dr. Francisco Javier Chorro
- Mission: to contribute to the study of different aspects of cardiovascular disease (CVD) from its origins to its consequences.

Oncology Area

- Coordinator: Dr. Andrés Cervantes
- Mission: to contribute to the study of different aspects of oncological diseases, at the stage of diagnosis and molecular characterization and selection of specific molecular targets of therapeutic interest.

Metabolism and Organic Damage Area

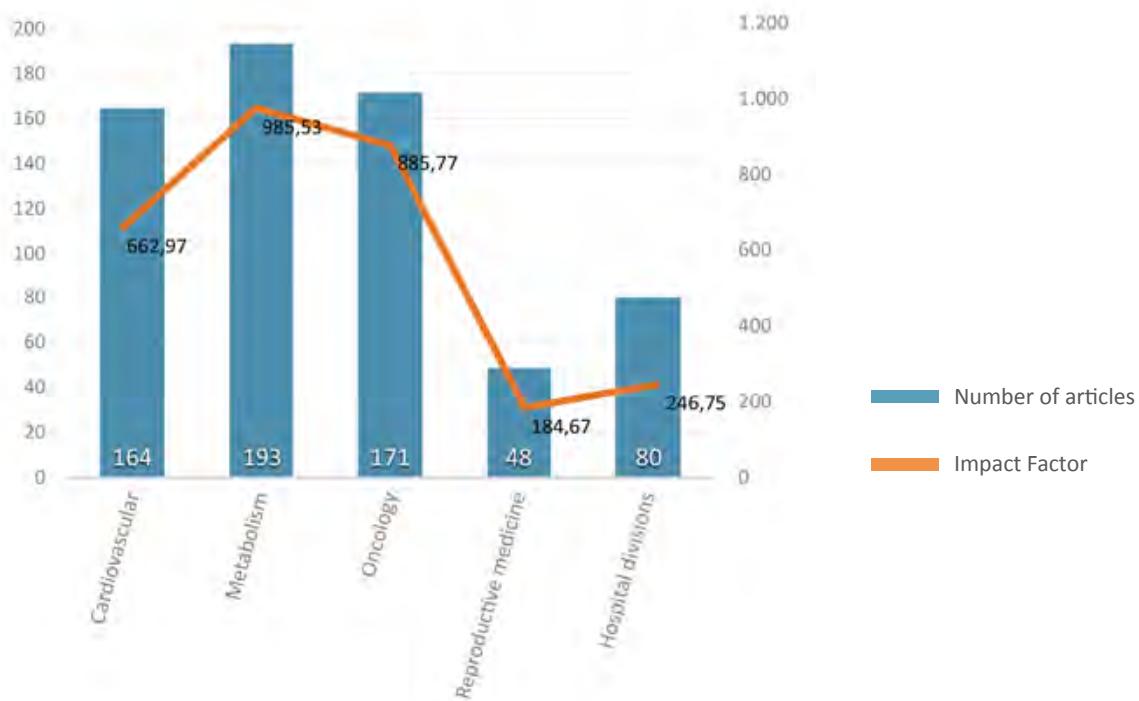

- Coordinator: Dr. José Viña
- Mission: to contribute to the study of the etiology, pathophysiology and diagnosis mechanisms or treatment of various metabolic diseases; or those that generate organ damage as a fundamental link of its trigger action.

Reproductive Medicine Area

- Coordinator: Dr. Carlos Simón
- Mission: to advance in knowledge of human reproduction for translational application, improving the efficiency of assisted reproduction treatment and reducing adverse effects.

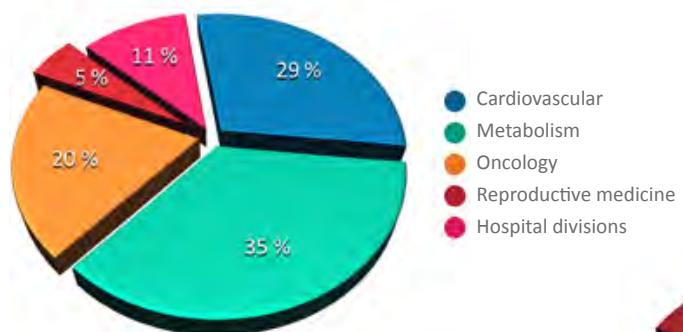

• Scientific production analysis by research area

The following charts and figures summarize the main scientific activity indicators of the four areas of research and the other divisions from *Hospital Clínico de Valencia*.

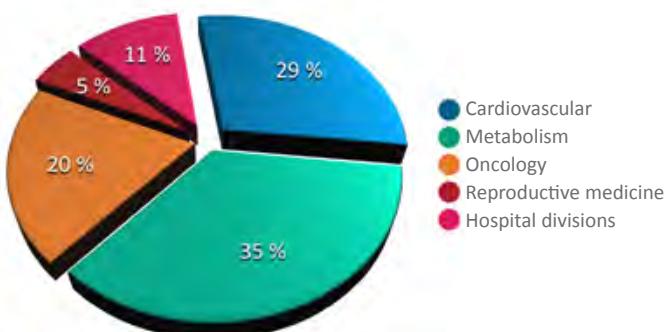

Since there are some scientific articles which are shared by two or more areas, it is worth mentioning that the sum of publications by area exceeds INCLIVA's total scientific output. Additionally, the next tables shows scientific publications distribution by area in terms of number of articles and impact factor.

Relative distribution of articles

Strategic aims

- In terms of scientific activity of the research group during 2017 we wish to emphasize the continuity of three competitive and multidisciplinary research projects led by Dr. Ascaso and Dr. Real. The project led by Dr. Ascaso, entitled "Immunopharmacological modulation of the systemic inflammation associated to metabolic disorders. Search for new therapeutic targets and synthesis of novel drugs", studies the role of shaft CCL11/CCR3 in systemic inflammation associated with Familial Hypercholesterolemia and its immune modulation by oral lipid overload, as well as the study of the role of the axis CXCL16/CXCR6 in Ang-II-induced Endothelial dysfunction in subjects with metabolic syndrome.
- On the other hand, the main objective the project "Study of new inflammatory and angiogenic mechanisms associated to severe morbid obesity: Role of CXCR3 axis and nuclear receptors RORs" led by Dr. Real, is to explore the CXCR3 axis and RORs receptors in patients with severe morbid obesity or without diabetes undergoing a gastric bypass.

Main lines of research

- Genetic diagnosis of primary hyperlipidemias and cardiovascular risk.
- Combination of primary hyperlipidemias with insulin resistance and diabetes mellitus.
- Postprandial lipidemia and atherosclerosis in states of insulin resistance.
- Insulin resistance, inflammation and oxidative stress.
- Diagnosis, prevention and treatment of diabetic foot.
- Genetic factors involved in the regulation of Body Mass Index and abdominal obesity.
- Sarcopenia and frailty in metabolic disease and diabetes.

Emerging researcher

Sergio Martínez Hervás

The line of research is based on cardiovascular risk, essentially on insulin resistance and diabetes, familial combined hyperlipidemia, inflammation, vitamin D, and atherosclerosis, just like new markers of cardiovascular risk.

Emerging researcher

Ana Bárbara García García

The research focuses mainly on DM2, one of the most frequent diseases of Western societies. On the other hand, another line of research is the identification of new genes responsible for abetalipoproteinemia with exome sequencing.

Strategic aims

- To identify genetic causes of complex diseases with high cardiovascular risk, especially of type 2 diabetes.
- To identify genetic causes of some rare diseases (Abeta, ATA and hereditary forms of hypercholesterolemias not caused by known genes).
- To identify alterations of methylation and hydroxymethylation in relation to the development of type 2 diabetes and its potential use as biomarkers.
- Study of environmental factors involved in the development of diseases of high cardiovascular risk, especially type 2 diabetes and associated organic damage.
- Support for genetic diagnosis in hereditary and oncological diseases.

Main lines of research

- Identification of genes involved in type 2 diabetes.
- Identification of genetic causes of rare diseases (not caused by genes known) as ATA, abeta or Hypercholesterolemia.
- Exome sequencing application for the detection of variants and genes involved in type 2 Diabetes development.
- DNA methylation and hydroxymethylation as a biomarker for type 2 development risk and organ damage.
- DNA methylation as a biomarker for organ damage in obesity and type 2 diabetes.
- Identification, and characterization at population and functional levels of rare and functional genetic variants related to the development of type 2 diabetes.
- Identification of different genes and polymorphisms involved in the development of obesity through different metabolic and functional pathways.
- Identification of relationships between different genes, essential metals and pollutants in relation to diseases with high cardiovascular risk.

Strategic aims

- Publication of the results obtained on using the 1,4-benzothiazepine derivative JTV-519 to modify the proarrhythmogenic manifestations of mechanoelectric feedback and continuation of the programmed experimental series to analyze the effects of KN-93, carvedilol and analogues, late Na⁺ current inhibitors and the Nitric Oxide carrier S-nitrosoglutathione.
- Continuation of the analysis of the effects of modifications of the basic electrophysiological properties on the processes involved in the induction and maintenance of ventricular fibrillation.
- Analysis of the electrophysiological effects of chronic physical exercise and its protective effect against arrhythmias, the influence of the cardiac nervous system and mitochondrial oxidative stress and the involvement of the IKATP current.
- Development of instruments for recording, processing and analysing cardiac electrophysiological signals obtained with mapping systems.
- Progressive development of the experimental series aimed to study the mechanisms involved in the deterioration of the systolic function, fibrosis and the inducibility of arrhythmias in a chronic model of infarction.
- Progressive development of an experimental model of metabolic syndrome to analyze the electrophysiological modifications and the inducibility of cardiac arrhythmias.

Main lines of research

- Myocardial stretching: analysis of electrophysiological changes induced by mechanical stretching. Autocrine/paracrine influences and study of protective actions by means of drugs.
- Clinical and basic research on heart failure: role of calcium homeostasis in arrhythmogenesis. Study on the effects of drugs acting on intracellular Ca²⁺ dynamics.
- Analysis of the effects of modifications in basic electrophysiological properties on the processes involved in induction and maintenance of ventricular fibrillation.
- Study of electrophysiological effects of chronic physical activity by: a) analysis of the protection against arrhyth-

mias or scientific activity facilitation of its reversion; b) study of the influence of heart's nervous system and mitochondrial oxidative stress; and c) analysis of the effects on the electrical instability induced by myocardial ischemia and the implication of IKATP current.

- Development and extension of tools for the registration, processing and analysing of cardiac electrophysiological signals based on multielectrodes and optical mapping systems able to analyze voltage and calcium signals.
- Study of mechanisms involved in the deterioration of the systolic function, fibrosis and the inducibility of arrhythmias in a chronic model of infarction.
- Study of electrophysiological modifications and inducibility of cardiac arrhythmias in an experimental model of metabolic syndrome.

Strategic aims

- To start the recruitment of acute myocardial infarction patients to be included in the studies of PI16/00229.
- To analyze the role of estrogen receptors on the regulation of miRNA by estradiol.
- To collaborate with Rare Diseased group on the histone effects on endothelial cell function and to publish a first paper on this topic.
- To publish the results on the role of Mas receptor on the estradiol and nitric oxide-mediated relaxation through nitric oxide.

Main lines of research

- Gender differences in cardiovascular area.
- Vascular effects of sex hormones.
- Identification of new hormone-regulated signaling pathways in endothelium.
- Identification and characterization of miRNA regulated by estradiol in endothelium.
- Interaction of sex hormones with pro-atherogenic factors.
- Determination of circulating endothelial progenitor cells and their link with hormone treatment.

Emerging Researcher

Susana Novella del Campo

The research focuses on the study of endothelial dysfunction associated with aging and lack of stress. We also studied the regulatory role of miRNAs associated with acute coronary syndrome and estrogen-dependent vascular function and aging.

Emerging researcher

Julio Núñez Villota. Hospital. University

Strategic aims

- Publication of manuscripts in high IF journals.
- CIBER Cardiovascular.
- Development of FIS projects.

Main lines of research

- Therapeutic and prognostic assessment of acute coronary syndromes and secondary prevention.
- Acute heart failure. New strategies for risk assessment and treatment and new control programs.

Emerging Researcher

Julio Núñez Villota (Department of Cardiology - Hospital Clínico Universitario of Valencia)

The research team has focused on the development of new clinical tools to improve diagnosis, risk stratification and treatment of patients with ischemic heart disease and heart failure. More specifically, we focus on identifying new biomarkers and therapeutic strategies. We have already carried out several independent clinical trials and have undergone numerous observational studies (potential utility of peritoneal dialysis for patients with advanced heart failure, the development of new algorithms for the monitoring of patients and the development of a new multi-marker approach for the stratification of the risk).

Strategic aims

- The PEDITEC UNIT brings healthcare workers into daily contact with engineers developing software for signal capture through mobile devices. Studying the physiological parameters that facilitate personalized therapy has been a priority aim during 2017, resulting in improved treatment of obese pediatric patients in the Unit.
- In the PAIDO Program, personalized medical care is extended through initiatives involving family, educators, nutritionists, physical education teachers and other social agents. Treatment goes beyond the hospital setting to include the child's environmental and personal sphere and is supported by state-of the art artificial intelligence technologies.
- Development of the FIS project: Prospective study from birth in more than 200 children now aged 10 years. The study collects information and material from the umbilical cord, with epigenetics and metabolomics research, monitoring clinical parameters and cardiometabolic phenotypes.
- Dr. Lurbe is the coordinator of the new consensus document of the European Society of Hypertension guidelines for the management of high blood pressure in children and adolescents.

Main lines of research

- New technologies applied to the detection of congenital heart diseases and sepsis in asymptomatic newborn babies.
- Childhood obesity.
- New technologies applied to the treatment of obesity.
- Impact of intrauterine life in the development of cardiometabolic disease.
- Arterial hypertension in children.
- Cardiovascular and renal risk in diabetes.

• AWARDS

Dr. Empar Lurbe Ferrer was appointed Honorary Member of the Castellan-Manchegan Society for HTA and Vascular Risk in February 2017, Honorary Member of the Spanish Society of Hypertension (SEH-LELHA) in March 2017 and Honorary Member of the Spanish Paediatric Association (AEP) in June 2017.

Pearson's correlation coefficients ($P<0.05$) showing the link among insulin, heart rate variability and cardiorespiratory fitness. All correlations were adjusted by degree of obesity, pubertal stage and breathing rate (baseline when heart rate variability and in effort when volume oxygen peak was considered, respectively). r_{L} denotes the relationship between Lomb-Scargle_low frequency/high frequency and fasting insulin. r_{br} denotes the relationship between SD of the NN interval series, Poincaré' S1 and S2. r_{cr} denotes the relationship between insulin and volume oxygen peak, refer to text for details.

Strategic aims

- Consolidation of various lines of cardiometabolic research.
- Consolidation of a network of partners in the area of primary care.

Main lines of research

- Epidemiological studies:
 - Valencian cardiometabolic study (ESCARVAL project)
 - Big Data
- Intervention studies:
 - Secondary Prevention Program (PROPRESE program)
- Cost-effectiveness qualitative studies:
 - Antiaggregation
- Systematic reviews of Cardiovascular Interventions.

Javier Pérez Hernández. INCLIVA

Emerging researchers

Fernando Martínez García. INCLIVA
María Tellez Plaza. INCLIVA

Strategic aims

- To start-up the laboratory for the analysis of podocytes (identification, cultivation and phenotyping) and its derivatives: micro-RNA, exosomes.
- The integration of metabolomics and genomics in the study of factors related to the development of kidney damage.
- Development of studies for noninvasive hemodynamic characterization in vascular pathology.
- Analysis of morbidity and mortality linked to the presence of hypertension and renal injury.
- Development of in vitro studies of platelet and leukocyte adhesion in venous thromboembolism.
- Genetic studies related to obesity and overweight and venous thromboembolism.
- Development of phase III and IV clinical trials.

Main lines of research

- Mechanisms of development of renal damage associated with hypertension with special emphasis on the podocyte damage.
- Impact of cardiovascular risk factors and renal function in absolute morbidity and mortality in high-risk population and in the general population.
- Inflammation and oxidative stress in the development of cardiovascular disease.
- Genomics, proteomics and metabolomics of early cardiometabolic and renal disorders.
- Impact of environmental toxins (metals) in cardiometabolic risk.
- Identification of polymorphisms and related to the control of BMI and waist circumference and the risk of obesity genes.
- Venous thrombosis in young patients: factors associated with its development.
- The relationship between risk of venous thromboembolic disease and arteriosclerosis.

Emerging Researcher

Fernando Martínez García

During the last year we have focused our research activity on the mechanisms involved in the development of microalbuminuria and kidney damage in hypertensive patients. We are also studying the role of new imaging techniques for the early diagnosis of atherosclerosis and the potential value of markers of vascular rigidity for risk prediction. And we are conducting some collaborative studies on the metabolic syndrome and insulin resistance.

Emerging Researcher

María Téllez Plaza

Dr. Tellez-Plaza lines of interest focuses on the health consequences of widespread exposure to environmental toxicants. Her research has built experience in population-based studies of chronic cardiovascular effects of cadmium, arsenic and other toxic metals. An important area of work involves the development of data analysis methods that can be applied to the study of environmental epigenetic effects.

Strategic aims

- Cardiovascular area:
Study of metabolome, epigenetic markers and microbiome in obese children with/without insulin resistance before and after personalized nutritional intervention and physical exercise.
- Area of human milk:
Characterization of mother-infant microbiome in term and preterm infants.
- Area of hospital malnutrition and artificial nutrition:
Validation of the pediatric screening tools for detecting the risk of malnutrition linked to chronic disease and pediatric hospitalization.

Main lines of research

- Cardiovascular area:
 - Study of early markers of vascular damage in dyslipidemic obese children by Doppler ultrasonography to establish a correlation with insulin resistance and other metabolic markers.
 - Monitoring exercise and energy consumption in obese schoolchildren and teenagers to adjust nutritional intervention.
- Area of human milk:
 - Analysis of defensive factors against norovirus infections and its relationship with histo-blood group antigens and FUT genotype.
 - Analysis of mother-fetal microbiome and cold preservation methods.
- Area of hospital malnutrition and artificial nutrition:
 - Screening procedures for detecting the risk of malnutrition linked to chronic disease and pediatric hospitalization.
 - Multicenter study of acceptance and quality of life in children treated with home enteral nutrition.

Strategic aims

- From our research experience from the last years in the clinical and experimental field related to ischemic cardiopathy, our current goal is to focus into a translational approach.
- In 2017 we continued dilucidating the physiological role of the immune dysregulation as well as the macroscopic, microscopic and molecular changes in the fibrotic process after a myocardial infarction by using a swine model. Moreover, we have started clarifying the implication of angiogenesis and new angiogenic biomarkers in the recovery of the microvasculature after a myocardial infarction in animal models and in patients.
- We have also developed new tools to study patients with ST-segment elevation myocardial infarction using cardiac magnetic resonance imaging.

Main lines of research

- Prospective registry of patients with first ST-segment elevation myocardial infarction studied with cardiac magnetic resonance imaging.
- Multicenter registry of patients with myocardial ischemia studied with stress cardiac magnetic resonance imaging.
- Porcine and mice model of experimental myocardial ischemia and myocardial infarction. To achieve a better understanding of the pathophysiology of ischemia, necrosis, fibrosis, angiogenesis, and reperfusion injury and test new novel therapeutic avenues.
- Involvement in several large international multicenter clinical trials in the field of acute coronary syndromes.

Strategic aims

- Contributing in terms of publications, theses and related conference attendance that substantiate this year's achievements.
- With specific regard to the line of Tissue Engineering, we have obtained funding to continue working on cartilage and bone regeneration techniques (Ministry Project) and their application in tracheal pathology (FISS Project).

Main lines of research

Regenerative Medicine:

- Study of cartilage regeneration.
- Study of bone regeneration.
- Study of the use of pulpal precursors in regenerative therapies.
- Study of regeneration of dental and periodontal tissues.
- Study of corneal induction and regeneration.

Histopathology:

- Study of recurrent myocardial infarction and its determinants.
- Study of vascularization in renal tumors.
- Study of ciliary pathology.

Strategic aims

- Clinical-pathological study of 40 patients affected by primary glioblastoma according to established protocol. Sample collection (formaldehyde, freezing, collection in culture medium) was performed, tissue matrices of the 40 tumors and neuropathological, immunohistochemical and FISH analysis of the matrices were performed according to established methodology.
 - Short-cell cultures and their viability analysis have been performed. Analysis by FISH of EGFR status and freezing of the different passes according to established methodology.
 - The study of the proteomic analysis of the 40 tumors (frozen samples) by Western Blott according to established methodology has been completed.
 - A cell line has been established from a primary culture of glioblastoma. Morphological, genetic and behavioral analysis in vitro (generation of neurospheres, functional migration profiles) have been completed.
- Experimental study.
 - Spheres (neurospheres) have been elaborated from different cell lines and cell cultures of glioblastoma, characterizing and analyzing their behavior.
 - Analysis of cultures subjected to silencing and overexpression by transfection of miRNAs by the lipofection method.
 - Analysis of cell cultures in hypoxia situation, analyzing their characteristics and behavior before silencing and overexpression by transfection of selected miRNAs in hypoxia situation and in the different amplification status of the EGFR.
 - The pilot study of viability and effectiveness of xenotransplantation in nude mice has been completed with the achievement of neoplasias under study.

Main lines of research

- Primary GBM. Amplification status of EGFR and angiogenic/infiltrative phenotype. Molecular networks responsible for tumor modulation and reprogramming processes.

- Role of microRNA in the regulation of EGFR-dependent signalling pathways in high-grade astrocytic gliomas.
- Development of a model for analyzing the modulation of microRNA gene activity in cell cultures of primary GBM and GBM cell lines.
- Development of a model of population analysis and spatial distribution of these neoplasias.
- Metabolomics and microvascular environment characterization of aggressive human glioma by DCE-MRI and genetic study of biopsies.

**Emerging researcher***Gloria Ribas Despuig*

Our scientific interests are based on both the study of genetic susceptibility to complex diseases, such as melanoma, as well as the understanding of genomic deregulation in solid tumors, specially Breast Cancer in Young Women. We are also involved in the characterization of genetics and epigenetic alterations that play a role in gastric cancer, specifically in the positive subgroups of Epstein Bar virus and instability.

**Emerging Researcher***Joan Climent Bataller*

Our research area focuses on exploiting “Systems” approaches for the understanding of cancer susceptibility and its sub-phenotype relationship.

The main experience focuses on breast cancer research and covers the use of novel mathematical tools for the comprehensive analysis of gene and gene expression data, with the purpose of optimizing responses to targeted pharmacological treatment.

**Emerging Researcher***Desamparados Roda Pérez*

Our interest is focused in personalised medicine and new drug development with the main objective of identifying new biomarkers of response to targeted agents in advanced solid tumors. We are also focused in a new multiomic characterisation of colorectal tumors, using a mathematical model specially in advanced rectal cancers.

Strategic aims

- Our group aims to improve the patient's life through the development of new diagnostic and therapeutic methods. In addition to this main goal, we intend to implement strategies to facilitate the development of precision medicine in solid tumors with innovative therapeutic approaches and provide knowledge on how to approach precision medicine in colorectal and gastric

cancer from different points such as molecular classification, the use of predictive biomarkers and new therapeutic approaches.

Main lines of research

- To develop first-in-human Phase I trials of antineoplastic agents with innovative designs.
- To develop liquid biopsies (ctDNA, cmicroRNAs) for early diagnosis, monitoring and the prediction of therapeutic effects in patients with gastro-intestinal malignancies.
- To use the latest technologies to improve our knowledge of the molecular and genetic causes of cancer.
- To implement the use of organoids (3D cell cultures) from patients as functional models, in order to understand the underlying causes of tumorigenesis and to test the appropriateness of the treatments.

Strategic aims

- Study of TDM1 and trastuzumab resistance in HER2+ by the generation and characterization of preclinical Trastuzumab-Resistant HER2+ Breast Cancer Models.
- Implication of miRNAs in breast cancer.
- Determination of a PAM50-based Chemo-Endocrine Score for Hormone Receptor-Positive Breast Cancer.
- Clinical implications of routine genomic mutation sequencing in PIK3CA/AKT1 and KRAS/NRAS/BRAF in metastatic breast cancer and determination of somatic oncogenic mutations using MassARRAY technology.
- Determination of High Proliferation as predictor of Pathological Complete Response to Neoadjuvant Chemotherapy in Early Breast Cancer.

Clinical trials to evaluate:

- Neoadjuvant pertuzumab and trastuzumab in patients with locally advanced, inflammatory, or early-stage HER2-positive breast cancer (NeoSphere).
- Nab-Paclitaxel in Metastatic Breast Cancer-Hormone Receptor-Positive Breast Cancer Receiving Adjuvant Triptorelin Plus Exemestane or Tamoxifen in the Suppression of Ovarian Function Trial (SOFT): The SOFT-EST Substudy.
- Pooled analysis of prospective European studies assessing the impact of using the 21-gene Recurrence Score assay on clinical decision making in women with oestrogen receptor-positive, human epidermal growth factor receptor 2-negative early-stage breast cancer.

Main lines of research

- Study of methylation as a prognostic and predictive factor of neoadjuvant treatment in triple negative breast cancer.
- Evaluation of microRNAs and mRNAs differentially expressed after chemotherapy treatment.
- Involvement of miRNAs in breast cancer processes.
- Role of tumor heterogeneity and dynamic reprogramming of tumor cell resistance to anti-HER2 therapy.
- Evaluation of the involvement of stem cells and epithelial-mesenchymal transition in the mechanisms of resistance to treatment in HER2 + breast cancer.

- Primary and secondary resistance in HER2 + breast cancer: Search for new treatments
- Interaction between estrogen receptors, tumor angiogenesis and breast cancer metabolism
- Molecular and Clinical characterization of breast tumors from very young women

Emerging Researcher

Isabel Chirivella González

The research line suggests a possible relation between mammographic density, as a genetic susceptibility marker and the risk to suffer breast cancer in women with a mutation in BRCA (hereditary breast cancer). We also have a project to evaluate a set of endometrial cancer risk markers in Lynch syndrome patients.

Emerging Researcher

Pilar Eroles Asensio

The lines of research aim at deepening the knowledge of some of the molecular subtypes of breast cancer, especially HER2+ and triple negative, through studies of expression and epigenetic changes (microRNAs, methylation) to decipher the possible mechanisms of resistance to current treatments. We intend to develop new strategies for diagnostic and therapeutic intervention to reverse the identified resistance, based on combinations with other biologic agents and the use of predictive biomarkers of resistance.

Strategic aims

- Nuclear CD34 expression by immunohistochemistry is present in primary melanomas which subsequently develop distant metastasis and have a shorter distant-metastasis-free survival. Nuclear location was confirmed in melanoma four cell lines by western blot.
- After modification of miR-205 expression levels in A375 melanoma cell line, the transcriptomic study revealed 271 genes differentially expressed (FDR<0.05).
- The study of circulating miRNAs as biomarkers in patients with melanoma by NGS of serum RNA revealed that hsa-miR-425-5p is downregulated in serum in melanoma patients which further developed metastasis compared with those who remained nonmetastatic.

Main lines of research

- Expression of epithelial–mesenchymal transition markers and tumor initiating cells (tumor stem cells) in tumor progression of human skin melanoma and in xenotransplantation in immunodeficient mice.
- Epidemiology and genetics of Birt-Hogg-Dubé familial cancer syndrome.
- Implication of selected microRNAs in tumor progression of melanoma.

Strategic aims

- Genomic heterogeneity in neuroblastoma (NB), especially in MYCN amplification.
- Xenotransplant models of NB.
- Importance of extracellular matrix and vascularization in NB.
- Morphological and molecular analysis of neuroblastic and malignant infantile skeletal tumours.

Main lines of research

- Genetic analysis in neuroblastoma. At the European level we participate in the establishment of a uniform nomenclature, and standard practices and quality validation studies, essential to obtain and maintain high quality in genetic results used for therapeutic stratification.
- Identification of new genetic factors with prognostic value in neuroblastic and malignant infantile skeletal tumors.
- Histopathologic studies of the expression of diagnostic and prognostic markers in solid pediatric tumors.
- Tumor microenvironments in neuroblastoma - research findings.
- Preclinical models. Obtaining and characterizing cell lines *in vivo* and *in vitro* from fresh neuroblastic and malignant infantile skeleton tumor material.

Strategic aims

- Translational research on biology and treatment of graft-versus-host disease after allogeneic transplantation of hematopoietic progenitor cells.
- Infection and immune reconstitution after haematopoietic transplant.
- Research into alloreactivity in new forms of allogeneic transplantation from alternative compatible and incompatible (haploidentical) donations.

Main lines of research

- Translational research on complications of allogeneic hematopoietic transplantation: graft-versus-host disease.
- Infection and immune reconstitution after hematopoietic transplantation.
- Translational research of alloreactivity in the context of new modalities of allogeneic transplantation from compatible and incompatible alternative donors (haploidential transplant).

Strategic aims

- During the year 2017, we were able to deepen the knowledge of the role of the NOTCH1 / FBXW7 / PI3K / PTEN / AKT signaling pathway in the progression of Chronic Lymphocytic Leukemia B (CLL-B) to advanced forms. Thus, in the cell lines and in the patient's primary cells, we observed a variation in the number of gene copies by both FISH and PCRq in the NOTCH1, FBXW7 and PTEN genes, with an inverse relationship between NOTCH1 and FBXW7 / PTEN.
- A second objective has been to analyze the clinical significance of the rearrangements of myc, bcl-2 and bcl-6 in diffuse large cell lymphoma. We have been able to verify that patients with concomitant c-myc and bcl-2 protein expression present a worse prognosis in terms of SLP and Sg than the rest.
- Thirdly, during 2017, the study of the mutational status of IgVH in CLL and its prognostic impact in a wide series of patients has been implemented. New molecular markers (mutations TP53, BIRC3, MYD88, NOTCH1 and SF3B1) have also been studied in CLL by new generation sequencing techniques. In addition, we have continued the collaboration in the GENOMA CLL sequencing project, with a clinical-evolutionary update.
- Finally, we have expanded our participation in clinical research projects in CLL, refractory lymphomas and multiple myeloma, both with the incorporation of new drugs and in the design and development of new therapeutic options.

Main lines of research

- Analysis of the interactions of CLL cells with their cellular microenvironment: further study of the intracellular mechanisms triggered by VEGF. Analysis of the possible correlation with CXCR4/CCR7 cytokines pathway. Transactivation mechanisms of the aforementioned receptors.
- Role of the NOTCH1 / FBXW7 / PI3K / PTEN / AKT signaling pathway in the progression of Chronic Lymphocytic Leukemia B (CLL -B) to advanced forms: pathway molecular profile analysis in 100 patients with CLL-B of primary cells obtained at diagnosis and at the time of the progression, analyzing for this, the

presence of mutations and number of copies of DNA, gene expression, FISH and (RT-PCR).

- Study of the rearrangements of bcl-2, bcl-6 and myc in diffuse large cell lymphoma: clinical significance and correlation with immunohistochemical expression using FISH and IHQ techniques.
- Study of new molecular markers (mutations of IgVH, TP53, BIRC3, MYD88, NOTCH1 and SF3B1) in CLL: conventional versus NGS techniques. Implication in clonal evolution associated with tumor progression.
- New therapeutic options for CLL/MM patients who are resistant to chemoimmunotherapy.

Strategic aims

- We have studied the expression of VEGF-C gene in bone marrow samples of adult acute myeloid leukemia “de novo” patients and its relationship with several clinical, cytogenetic and molecular variables with established prognostic value, as well as the rate of complete remission (CR), overall survival (OS) and event free survival (EFS). We also study expression of 84 genes involved in VEGF signaling in AML patients, through microarray technology. The results have been published in the journal Leukemia & Lymphoma in January 2018.
- We have studied the role of the RUNX1 / CBF-beta / p300 / HIPK2 complex in the leukemic progression of chronic myeloproliferative malignancies. Part of this study has been published in Br J Haematol journal in September 2017.
- We are assessing the predictive value of DNMT3A and IDH1 / IDH2 mutations in the azacytidine response in a number of patients with myeloid neoplasms. Preliminary results have been presented at the international meeting of myelodysplastic syndromes in May of 2017. We also had studied the impact of gene mutations and dynamics methylation of CDKN2B and DLC-1 Promoters on Treatment Response with Azacitidine who results have been presented in the ASH Annual Meeting in December 2017.

Main lines of research

- Studies of new biological prognostic factors in acute myelogenous leukemia.
- Studies of mutations of DNA methylation genes as biomarkers for response of hypomethylating agent used to treat high-risk myelodysplastic syndromes and acute myeloid leukemia in patients who are not eligible for intensive strategies.
- Study of factors influencing the risk of thrombosis in Philadelphia-negative myeloproliferative disorders.
- Study of mechanisms involved in the leukemic progression of chronic myeloproliferative neoplasms.
- Clinical guidelines for diagnosis, prognosis and treatment of myelodysplastic syndromes.
- Clinical guidelines for assessment of response in chro-

nic myeloid leukemia.

- Studies within the CETLAM registry.
- Studies within the PETHEMA registry.
- Studies within the Spanish Registry of Myelofibrosis.
- Spanish within the registry of Myelodysplastic syndromes.

Emerging Researcher

Juan Carlos Hernández Boluda

Our research is focused on the molecular mechanisms involved in the progression of the chronic myeloproliferative neoplasms from the chronic phase to the leukemic phase.

Strategic aims

- The expression of EPDR1 has been studied in 140 paired samples from CRC patients. EPDR1 is more expressed in tumour than normal tissue. EPDR1 expression is directly related to T parameter, being higher among patients diagnosed with T3 and T4 CRC, independently from nodal involvement. EPDR1 seems to be a new marker of tumour invasiveness in CRC patients and its detection could predict tumour infiltration.
- The selection between KRAS alternative splicing isoforms 4A (apoptotic) and 4B (anti-apoptotic) in CRC-derived cell lines, depends on histone post-translational modifications (PTM). Manuscript accepted in Oncotarget
- The mechanisms of histone PTM-dependent early gene expression in an acute pancreatitis mice model have been studied. A general diminution of the methylation level has been observed.

Main lines of research

- Exploring the role of ZNF518B and EPDR1 genes in human colorectal cancer: A translational approach. As EPDR1 expression is higher in patients diagnosed with T3 and T4 CRC, we will check whether the gene is a marker of tumour invasiveness. We will check whether the gene expression is regulated by DNA methylation in patient tissues, as it is in CRC cell lines. The expression of ZNF518B will be determined in the samples used for EPDR1.
- Epigenetic changes in acute pancreatitis. The study is now aimed at the mechanisms involved in histone demethylation.
- Role of EPDR1 in bladder cancer. We are analysing the expression of the gene in samples from urine, before and after bladder washing, and in tissue samples from transurethral resection of tumours.

Strategic aims

- Identify new metabolomic markers of tumor aggressiveness in breast cancer.
- Identify new markers of myocardial infarction.
- Identify new metabolomic cardiovascular risk markers based on the microbiota-host interaction.

Main lines of research

- Tumor metabolism through metabolic profiles in biopsies, biofluids and cells (breast cancer, glioblastoma multiforme, prostate, bladder).
- Metabolic profiles in the progression of cardiometabolic risk modulated by the microbiota-host interaction.
- Metabolic profiles of healthy aging vs frailty.
- MRI microimaging study of porcine cardiac tissue samples to develop new detection methods.

Strategic aims

- Our group has continued the study of the association between candidate genes and polymorphisms and bone phenotypes.
- This year, we have studied the role of B-lymphocytes in bone phenotypes using a translational approach. In this way, we have identified the CD80 gene as a candidate for studies of association to bone phenotypes.
- We continue the study of miRNAs associated with bone fracture.
- We have participated in a national collaborative study that has identified SNPs in miRNAs that have been associated with an osteoporotic phenotype.
- We have performed the usual collaborations on aspects related to bone metabolism during pregnancy and on aspects related to fertility.

Main lines of research

- Research and analysis of polymorphisms in estrogen-regulated, the immune system of the Wnt / beta-catenin pathway and B-cell associated with postmenopausal osteoporosis genes.
- Identification of new genes regulated by estrogen in murine models of accelerated bone loss.
- Analysis of miRNAs profile and circulating cytokines in osteoporotic hip fracture.
- Identification of genes differentially expressed in osteoblasts after an osteoporotic fracture.
- Role of B cell and CD40 / CD40L system in postmenopausal bone loss.
- Functional characterization via genetic and epigenetic variants associated with bone phenotypes techniques.
- Genetic, biochemical and cytological characterization and identification of biomarkers in patients with Idic15 syndrome.

Strategic aims

- To evaluate whether metformin treatment might modulate ER stress, autophagy, and oxidative stress in leukocytes of type 2 diabetic (T2D) patients.
- To determine if metformin treatment protects T2D patient leukocytes from oxidative stress by regulating ROS production and antioxidant enzyme expression.
- To assess whether metformin modulates leukocyte-endothelium interactions and adhesion molecule expression in T2D patients.
- To evaluate the relationship between testosterone levels, metabolic parameters, mitochondrial function, adhesion molecules and leukocyte-endothelium in T2D patients.
- To evaluate whether metabolic profile influences ER and oxidative stress in an obese population with/without comorbidities.
- To evaluate the effect of pinitol on peripheral blood mononuclear cells (PBMCs) and visceral (VAT) and subcutaneous adipose tissues (SAT) in human obese subjects, focusing on the involvement of endoplasmic reticulum (ER) stress and sirtuin 1 (SIRT1).
- To evaluate whether the presence of metabolic syndrome in polycystic ovary syndrome patients can influence endoplasmic reticulum (ER) and oxidative stress and leukocyte- endothelium interactions.
- To determine the prevalence of nutritional risk and malnutrition, and the type and degree of malnutrition in outpatient, hospitalized and institutionalized populations in a health department.

Main lines of research

- Prevalence of nutritional risk and malnutrition.
- Diabetes mellitus and cardiovascular risk.
- Obesity, inflammation and endothelial dysfunction.
- Polycystic ovary syndrome and insulin resistance.
- Dyslipidemia and residual cardiovascular risk.
- Functional foods and their influence on cardiovascular risk factors.
- Endoplasmic reticulum stress, mitochondrial dysfunction and oxidative stress.
- Characterization of new cellular mechanisms of antiretroviral hepatotoxicity.

Strategic aims

Around 40% of patients with liver cirrhosis have minimal hepatic encephalopathy (MHE) with alterations in cognitive function, attention, motor coordination and sleep, which impair their quality of life and reduce their survival. A better characterization of these neurological alterations would allow detecting MHE at earlier stages and with greater sensitivity. Hyperammonemia and inflammation act synergistically in the induction of neurologic impairment, but the underlying mechanisms are not known. A detailed characterization of the inflammatory processes associated with appearance of MHE would allow identifying early biomarkers of MHE.

The aims of the project are:

- 1) To characterize in detail the early neurological alterations in MHE. Assess whether other tests may improve detection of MHE.
- 2) To characterize the inflammatory processes associated to the onset and progression of MHE. Assess their utility as biomarkers or predictors of MHE.
- 3) To analyze the mechanisms involved in oxidative/nitrosative stress associated with MHE and the contribution of peroxynitrite formation and protein nitration to the appearance of MHE.
- 4) To characterize the alterations in cerebral activity and neuronal connectivity by EEG brain mapping during wakefulness and in the different stages of sleep.
- 5) To characterize the alterations in brain activity by functional magnetic resonance: functional connectivity in resting state and the pattern of activation of brain regions during performance of attention tests and mismatch negativity (MMN).
- 6) To identify procedures based on above results, which improve diagnosis of MHE allowing an earlier detection.
- 7) Assess whether treatment with tadalafil restores cognitive function in patients with MHE.

Main lines of research

- Characterization of cognitive, neuropsychological and in patients with minimal hepatic encephalopathy with cognitive impairment mild.
- Characterize alterations in inflammation, neuroinflamm-

mation, function and brain structure associated with the appearance of hepatic encephalopathy Minimum (EHM).

- Identify biomarkers for early detection of deterioration cognitive disease in the EHM.
 - Hepatic encephalopathy. Clinical, and biochemical diagnostics.
 - Detection of the presence of MHE in cirrhotic patients. Comparison of psychometric tests and critical flicker frequency. Study of peripheral parameters related with cGMP homeostasis and inflammation as possible indicators of the presence of MHE.
 - MHE biomarkers. Identification of metabolites to be use in the diagnosis of MINIMAL hepatic encephalopathy.
 - Study of brain disorders using magnetic resonance imaging (including edema, cerebral atrophy, abnormal neural tracts) in patients with liver cirrhosis. Useful in the diagnosis of minimal hepatic encephalopathy.
 - Study of alterations in attention, quality and sleep patterns in patients with liver cirrhosis with or without minimal hepatic encephalopathy.
 - Study of impaired driving ability in patients with liver cirrhosis. Correlation with the presence of MHE.
 - Analysis of synergistic effect between hyperammonemia and inflammation in the induction of MHE cognitive impairment.
 - About the hepatitis, to study the epidemiological and therapeutic aspects of immunoprophylaxis.
 - Development and characterization of an animal model of alcohol-induced hepatic encephalopathy.

Strategic aims

- Study of the novel molecular, biochemical, cellular and genetic mechanisms involved in the etiopathogenesis of chronic obstructive pulmonary disease (COPD).
- Study of the role of CXCL16/CXCR6 axis in the cardiovascular disease associated to COPD, metabolic syndrome and abdominal aortic aneurysm (AAA).
- Study of the beneficial effect of Vitamin D in AAA development.
- Study of the impact of GLP1 analogues in the development of atherosclerosis in insulin resistance.
- Synthesis of new dual PPAR α/γ agonists.

Main lines of research

- Study of the novel molecular, biochemical, cellular and genetic mechanisms involved in the etiopathogenesis of chronic obstructive pulmonary disease (COPD). Lung and systemic effects.
- Study of the vascular inflammation induced by different risk factors of atherosclerosis: angiotensin-II, menopause, cigarette smoke, metabolic syndrome, insulin resistance or familial hypercholesterolemia.
- Study of the role of retinoid X receptors (RXR) in inflammation angiogenesis.
- Study of the role of CXCR3 axis and nuclear ROR receptors in human obesity.
- Study of new anti-angiogenic mediators in acute myocardial infarct.
- Study of the CDKN2A/B genes and the LIGHT cytokine in the atherosclerosis associated with insulin resistance.
- Synthesis of new dopaminergic isoquinolines as anti-Parkinson drugs.
- Synthesis of new dual PPAR α/γ agonists to be used in cardiometabolic disorders.

Emerging Researcher

Herminia González Navarro

The research is focused in the study of the molecular mechanisms of the diabetes mellitus (DM) and its effect on atherosclerosis development which is one of the main causes of cardiovascular diseases. To perform

these studies we employ genetically-modified mice that develop metabolic alterations such as diabetes, insulin resistance, fatty liver disease (another related metabolic disease) and atherosclerosis. To translate our findings into the human pathology we also perform investigations in human subjects and in human cell cultures. Specifically our research lines are focused in the understanding of one main mechanism connecting these metabolic diseases, the unbalanced interplay of the different immune cellular subsets. Recently, we have observed that either genetic inactivation of some key inflammatory mediators or inhibition of intracellular signaling-cascades in mice and human cells restore the immune cell homeostasis and decreases disease progression. These studies will allow us to identify novel therapeutic targets based on immune cell modulation to treat metabolic diseases.

Emerging Researcher

Laura Piqueras Ruiz

The preclinical research focuses on the understanding of the molecular and cellular mechanisms that underlie the development and progression of the aneurysm. We are also exploring the effect of several nuclear receptors, X retinoid receptor (RXR), peroxisome proliferator activating receptors (PPAR) and vitamin D receptor ligands (VDR) in the development of AAA. We are also interested in characterizing the new molecular mechanism associated with the formation of aneurysms in animal models and human samples. Additionally, we are investigating the role of several nuclear receptors on inflammation and angiogenesis associated to obesity.

Emerging Researcher

Nuria Cabedo Escrig

The lines of research focus in: 1) Synthesis of biologically active molecules, highlighting the compounds with PPAR activity, anti-inflammatory, dopaminergic, antimicrobial and cytotoxic agents; 2) Purification and identification of natural metabolites of plant or fungal origin.

Strategic aims

- Among the scientific activity of the research group, remarkable achievements are the extension to PCT phase of the European patent "Mass spectrometry-based methods for the detection of circulating histones H3 and H2B in plasma from sepsis or septic shock (ss) patients" (PCT/EP2017/078362). Related to this patent, the technology was selected to participate in the mentorship program from FIPSE and MIT Idea2 global.
- In reference to acquisition of budget and resources, funding from the following programs and grants has been obtained: VLC-Bioclinic 2017 (2 projects), Plan Nacional I+D+i del Mineco (1 project, 2016-2019), AES 2016 (2 projects, 2017-2019), Fundación Ramón Areces (1 project, 2017-2019), AES 2017 (1 project, 2018-2019).
- Regarding teaching and outreach activities, the group has maintained the teaching of the subject "Enfermedades raras", from the Grade on Medicine's study plan at the University of Valencia and in the master course in Biomedical Research; and also in the "Máster de enfermedades raras", directed by Dr. Pallardó, at the same University. Besides, it was organized, in collaboration with the Escuela Valenciana de Estudios de la Salud and the CIBERER, the 2nd edition of the on-line course "Introducción a las EE.RR: investigación y atención clínica" addressed to residents of medical specialities from the Valencian public health system.
- Within the framework of the Alliance for translational research in rare diseases of the Comunitat Valenciana, Dr. Pallardó has coordinated the joint application for FEDER funding for acquisition of research infrastructure. As result of that, our group have coordinated de acquisition of equipments for more than 500.000 € for the research on epigenetics and personalized medicine in rare diseases.

Main lines of research

- Pathophysiology of Friedreich's ataxia and other neuro-muscular diseases.
- Study of oxidative stress and mechanisms of DNA repair in different progeroid syndromes and genodermatoses.
- Epigenetic regulation in the pathophysiology of rare diseases.
- Rare respiratory diseases: Alpha-1 antitrypsin deficiency and Primary Ciliary Dyskinesia.

Emerging Researcher

José Luis García Giménez

We aim to understand the role of epigenetics in the phenotypic variability of rare diseases (eg, Friedreich's ataxia, dyskeratosis congenita and adolescent idiopathic scoliosis). Furthermore, we collaborate with clinicians of Intensive Care Unit to study the role of circulating histones in the physiopathology of sepsis and septic shock. Our challenge is to identify epigenetic biomarkers (DNA methylation, microRNAs, and post-translational modifications of histones) to design new potential tools for diagnostic and prognostic and improve precision medicine.

Emerging Researcher

Francisco Dasí Hernández

The research is mainly devoted to the study alpha-1 antitrypsin deficiency (AATD) and the study of other rare pulmonary rare diseases such as primary ciliary dyskinesia is currently under development.

Strategic aims

- To study the role of Mediterranean diet and the individual effect of olive oil and dietary polyphenols on hemodynamics, endothelial function, abdominal adiposity and gene expression in patients at high cardiovascular risk has been studied.
- To monitor the morbidly obese patients in terms of anthropometric changes, metabolic and oxidative stress markers before and after dietary intervention, exercise and bariatric surgery.
- To analyze in gastric carcinoma patients the role of DNA damage and different markers of oxidative stress in order to validate the modified base 8-oxo-dG as a possible tumor marker at high cardiovascular risk.

Main lines of research

- Study of the role of OS as a physiopathological mechanism of cardiometabolic diseases.
- Study of DNA damage and repair signaling routes in patients with cardiovascular evolution pathologies, in order to identify grades of expression in different genes.
- Study of OS role in the pathology of neoplastic diseases, as well as the possible validation of their molecular oxidative products as clinical markers.

Strategic aims

- Elaboration of a mobile application associated to the Clinical Records to improve adherence to the treatment of patients with first episode psychosis.
- Publication of first Gene –Enviromental interaction Episode Psychosis projects results.
- Development of new techniques-to diagnosis psychosis by fMRI and machine learning approach.
- Development of animal models in severe mental disorder and neurodegenerative diseases.
- Evaluation of brain changes after cognitive therapy in persistent hallucinations in psychosis.
- Prediction and treatment models in first psychotic episodes.

Main lines of research

- Identifying risk polymorphisms in psychosis and affective disorders.
- Epigenetic studies (functional expression) of candidate genes in psychosis and mental illness.
- Study on animal models in serious mental illness.
- Generating models of neurodegenerative diseases (Friedreich ataxia) on invertebrate animals (*Drosophila*).
- Study of mutations in monogenic neurodegenerative diseases.
- Identifying genetic and environmental risk factors in affective and psychotic disorders.
- Identifying abnormal patterns in neuroimaging (morphometry, functional, spectroscopy) in psychotic patients.
- Design and coordination of clinical, genetic and neuroimage data bases oriented to performing multicenter projects.
- Development of interactive systems for improving therapeutic adherence.
- Study on the efficiency of psycho-social intervention techniques in serious mental illness.

Strategic aims

- To evaluate the usefulness of non invasive ventilation in the weaning process of patients with chronic critical disorders and those with prolonged mechanical ventilation in Respiratory Care Units.
- To analyze physiology of cough in patients with amyotrophic lateral sclerosis (ALS) during mechanically assisted cough, with high frequency oscillations.
- To study the effect of bulbar type of ALS among the efficacy of coughing , mechanically assisted with in-exhalation, through high frequency oscillations in ALS patients.
- To identify the predictive factors for complicated grief in relatives of severe respiratory patients.
- To study clinical tools to evaluate front-temporal dementia to ALS patients.
- To find effective non-pharmacological treatments to improve dysnea in patients with chronic respiratory failure.

Main lines of research

- Study of long term utility of mechanically assisted cough with in-exhalation, through high frequency oscillations, in ALS patients.
- Study of the efficacy of mechanically assisted cough with in-exhalation, through high frequency oscillations, during acute respiratory infections, in ALS patients.
- Study of long term utility of mechanically assisted cough with in-exhalation, through high frequency oscillations, in ALS patients and mechanical ventilation trough tracheotomy.
- Study of physio-pathology of assisted cough with in-exhalation, through high frequency oscillations, in ALS patients.
- Study of the effect of bulbar alteration in survival of ALS patients and non invasive mechanical ventilation.
- Study of the physio-pathology in the failure of non invasive mechanical ventilation in ALS patients.
- Study of treatment with quinidine/dextromethorphan in the delay of failure of non invasive management of respiratory problems in ALS patients.
- To improve knowledge in the staging of patients with neuromuscular diseases to anticipate decisions and to adjust respiratory therapeutic measures.
- To improve knowledge in technical assistance and repla-

cement of the respiratory muscles in neuromuscular diseases, particularly to the life-prolonging without adding suffering.

- To improve knowledge in the management of the psycho-emotional needs in patients with COPD and incapacitating dyspnea and their caregivers.
- To improve knowledge about the role of genetic polymorphisms in the predisposition, severity and susceptibility to bacteremia in community-acquired pneumonia.
- To evaluate the efficiency of the management of dyspnea.
- To assess cognitive / behavioral signs associated with neuromuscular dementia patients and their involvement in the decision-making process.
- To evaluate the prevalence of stressful life events, different styles of attachment and the proportion of adaptive and problem duels present in relatives of patients at the end of life.
- Cardiac morphological changes in patients with sleep respiratory disorders and ischemic heart disease: response to CPAP treatment.
- Effects of e-liquids (propylene glycol (PG), diethylene glycol (DG), and nicotine) from electronic cigarettes in human cell cultures: Human umbilical vein endothelial cells (HUVEC) and adenocarcinomic human alveolar basal epithelial cells (A549).
- Efficacy of a tobacco treatment program about severe exacerbation in smokers with a moderate or severe COPD.
- Evaluation of CPAP on kidney function in patients with early-stage renal disease and sleep apnea syndrome (RENAS study).
- Characterization of asthmatic patients: new bio-markers (periostine and protein CC16) and their relationship with the severity of bronchial asthma.
- Study of genetic variability in the susceptibility and severity of pneumonia.
- Efficiency of an integrated program for COPD patients with frequent hospital admissions.
- Open label multicentric study of RCP1063 oral in recurrent multiple sclerosis (MS).
- Randomized, double-blind, multicentric, parallel groups, controlled with placebo and variable duration, to evaluate efficacy and safety of Sponimod (BAF312) in patients with secondary MS, followed by an open extension treatment of BAF312.

Strategic aims

- Calpains, activated in the mammary gland during involution can be implicated in cell anchoring loss. The isoform-specific function of CAPN1 and -2 was explored in two models of cell-adhesion disruption: mice mammary gland during involution and breast cancer cell lines.
- Role of calpains in cancer cells, CAPNs appear in the nucleolar compartment, having a role in ribosomal biogenesis.
- Vitamin A deficiency impairs lung basement membrane and alters lung parenchyma. Our goal was to elicit several proteins responsible for this alteration.

Main lines of research

- The mammary gland as a physiological model for the study of programmed cell death.
- Mammalian tissues metabolism and its regulation.
- Role of calpains in proliferation of cancer cells: Colon cancer cell lines.
- Vitamin A deficiency induces oxidative stress in several tissues including lung and liver.

Emerging Researcher

Rosa Zaragozá Colom

The research has been focused on the pathways that regulate mammary gland involution after the pregnancy/ lactation cycle and how these pathways become deregulated in breast cancer. Over the past years, our group has unveiled the role of calpains, calcium-dependent proteases, in the mammary tissue. We have demonstrated a dual role for calpains during involution, controlling programmed cell death of epithelial cells and adipocyte redifferentiation. Moreover, in breast cancer cell lines, calpains are involved in adhesion and cell migration. In the near future we will try to elucidate new functions of these proteases according to their subcellular localization.

Strategic aims

- Prevented of neuronal death in Alzheimer's by Glutaminase Inhibition Pr.
- Identification of exercise training as a drug to treat age associated frailty.
- Testing that G6PD protects from oxidative damage and improves healthspan in mice.
- Reductive stress: a new concept in Alzheimer's disease.

Main lines of research

- Aging: identification of genes associated with aging, particularly genes that are specific in centenarian people. Implication of the estrogens and phytoestrogens in the prevention of age-related damage.
- Physical activity: identification of the molecular mechanisms by which physical activity is good for health. Identification of the mechanisms by which physical activity and antioxidant supplements help preventing primary and secondary sarcopenia in both human and animal studies. Identification of the best exercise intervention to delay and to treat frailty in humans.
- Physiopathology of the Alzheimer's disease: identification of the mechanisms by which free radicals, originators of the oxidative stress are used to unleash cell signals that lead to cell death in Alzheimer disease.

Emerging Researcher

María Carmen Gómez Cabrera

The main aim of this research is to study the beneficial effects of physical activity in prevention and treatment of several pathologies and more specifically on Alzheimer's disease, senile sarcopenia and frailty. We are also interested in the study of the molecular bases of skeletal muscle atrophy during periods of immobilization, as well as in its prevention.

Emerging Researcher

Juan Gambini Buchón

The research line focuses on longevity, oxidative stress, centenarians, fragility and nutrition.

Emerging Researcher

Ana Lloret Alcañiz

Our main line of research has been the role of oxidative stress in Alzheimer's disease. Our group elucidated the importance of mitochondria in the generation of oxidants by their direct interaction with the amyloid peptide of Alzheimer. In recent years, we have focused on the study of the molecular changes produced by the toxicity of beta-amyloid.

Emerging Researcher

Consuelo Borrás Blasco

The research focuses on stem cells and their optimization for the use of them, or their derived exosomes, in the regeneration of different tissues. We have studied the role of oxygen

concentration in different parameters such as proliferation, pluripotency, senescence or apoptosis in the culture of human dental pulp stem cells (hDPSC) observing that the properties of stem cells are better maintained under physiological oxygen concentrations. The step we have taken now is to study if there is a beneficial effect of the addition of exosomes from "young" stem cells to "old" stem cells.

Strategic aims

- The effects of advanced monitoring on hemodynamic management in critically ill patients.
- Open lung approach for the acute respiratory distress syndrome.
- Stratification and outcome of acute respiratory distress syndrome.
- Recommendations on invasive candidiasis in patients with complicated intra-abdominal infection and surgical patients with ICU extended stay.
- Pharmacokinetics of anidulafungin during venovenous extracorporeal membrane oxygenation.

Emerging Researcher

Carlos Ferrando Ortola

Some of the ongoing research lines in our group are: 1. Role of anaesthetics in the inflammatory response in anaesthesia and critical care patients. 2. Strategies to optimize and individualize intraoperative ventilatory management (precision medicine) 3. Role of the perioperative ventilatory strategies in postoperative complications. 4. Role of perioperative supplemental oxygen in postoperative complications.

Main lines of research

- Oxidative stress and protection of organs in ischemia-reperfusion surgery.
- Study of hyperglycemia and aldose reductase-mediated mitochondrial dysfunction and apoptosis in platelets in critical patients.
- Ventilatory and pharmacological strategies to decrease organ damage in the lungs associated with mechanical ventilation in healthy and injured lungs.
- Development of hemodynamic monitoring and its application in the field of patients undergoing surgery or admitted to critical care units.
- Study and development of methods of detection of infections, especially fungal and virological, and how to prevent them.
- Study and development of therapeutic drug monitoring (TDM) to describe antimicrobials pharmacokinetics (PK) and determination of minimum inhibitory concentration (MIC).
- Development of new strategies and drugs for pain treatment.

Strategic aims

- We have published proof-of-concept that boosting endogenous expression of Muscleblind by blocking specific inhibitory miRNAs was able to suppress several Myotonic Dystrophy-like phenotypes in a Drosophila model of disease. This proved that miRNA-based drugs constitute a new therapeutic strategy for the disease. A strategic aim for the laboratory will be to provide additional proof of activity and safety in murine models and to move on these strategies towards preclinical development.
- Second, we have started scientific collaborations that confirm our laboratory as a national reference in the characterization of Drosophila heart phenotypes.

Main lines of research

- Use of miRNAs as therapeutic targets in myotonic dystrophy (DM).
- Discovery, development, and repurposing of drugs for the treatment of DM.
- Study of the molecular causes of muscle atrophy, heart dysfunction, and CNS degeneration in DM.
- Study of the molecular mechanisms associated with spinal muscular atrophy and search for potential therapies.
- Understanding human podocyte function through Drosophila nephrocytes.
- Development of a LGMD1F Drosophila model.

Strategic aims

- Project on "Comorbidity between Cancer and Central Nervous System Disorders", which aims to synthesize epidemiological evidence and assess the validity of associations between central nervous system disorders and the risk of developing or dying from cancer. It is a collaborative meta-analysis in 5 countries (Spain, Canada, Australia, United Kingdom and the United States) coordinated by the University of Valencia/CIBERSAM (Dr. Catalá-López, Prof. Tabarés-Seisdedos). Several studies have been published in Systematic Reviews and Scientific Reports.
- "The Global Burden of Disease Study" is the largest international collaborative project on the epidemiology of diseases, injuries and risk factors at the global, national and regional levels. During this year have been published in prestigious journals such as The Lancet, JAMA and The New England Journal of Medicine.
- Projects in advanced methods of systematic reviews and meta-analyses, including the publication in PLoS One interested in the identification of endophenotypes, as well as biomarkers of neuroprogression and clinical staging in bipolar and psychotic disorders.
- Various papers and editorials have been published on methodological quality, biases and conflicts of interest in mental health research, public health and health economics.

Main lines of research

- Study of neurocognitive endophenotypes in schizophrenia and bipolar disorder.
- Study of pharmacological strategies for improving cognitive function in bipolar disorder.
- Epidemiology and disability associated with TMG.
- Identification of biomarkers in TMG.
- Study of the direct and reverse comorbidity in TMG in relation to cancer and diabetes.
- Development and efficacy study of psychoeducation and neurocognitive therapy and functional rehabilitation for people with SMI.
- Establishment of a clinical staging system (ClinicalStaging) applied to bipolar disorder by the combination of biomarkers, neurocognitive and functional performance.

Principal investigator

Antonio Cano Sánchez
University

Emerging researcher

Raúl Gómez Gallego. INCLIVA

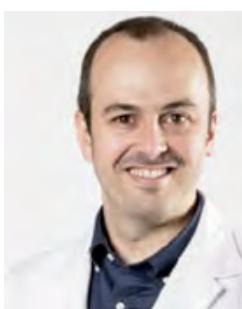

Strategic aims

- We have positioned our group in the field of healthy ageing, with special interest to frailty, where we have collaborated in the support of INCLIVA in the project ADVANTAGE. We have collaborated to position the reference site of the Valencia Region within EIPAHA, the partnership of the European Commission. Moreover, we have participated in the application to different European projects with groups from different European countries, including an application to the Marie Curie grants. Finally, we continue being coordinators of the FOCUS European project.

Main lines of research

- In healthy ageing in the female we are continuing our interest on osteoporosis but also have added frailty and functional decline. We are consolidating the CARMEN cohort (see the EIPAHA commitment tracker, https://ec.europa.eu/eip/ageing/commitments-tracker/a3/integrated-care-and-ict-reduce-frailty-and-chronic-diseases-ageing-women_en).
- With regard to endometriosis:
 - To analyze the role of microRNA and vascularization regulators and pain mechanisms. Role of the TNF cytokine family.
 - To analyze the initial atherogenesis and selective estrogen receptor modulators.

Emerging Researcher

Raúl Gómez Gallego

The lines of research have focused on the dissection of how the deregulation of the angiogenic component is related to the onset and maintenance of gynecological disorders such as endometriosis, ovarian hyperstimulation syndrome, recurrent miscarriage or preeclampsia. We are also interested in developing tests for the early non-invasive diagnosis of endometriosis through combined analysis of multiple biomarkers simultaneously.

Strategic aims

- Advance understanding of mechanisms regulating maternal-fetal communication that may be involved in implantation of the embryo in the maternal uterus, and understand the embryonic/fetal origin of adult diseases such as obesity and type II diabetes.
- New therapeutic approaches to regenerate reproductive function in women with endometrial atrophy and/or Asherman's Syndrome.
- Create an *in vitro* model to obtain germ cells through direct reprogramming of human somatic cells.

Main lines of research

- Adult stem cells in the human endometrium: the monthly hormonal regenerative capacity of endometrial tissue makes it a candidate for research into its still undocumented stem cell population.
- Study of endometrial proteomics and embryonic viability: This line of research aims to determine the exact protein profile of the human endometrial response. At present, selection of the most viable embryo is based solely on morphological parameters, without guarantee of a genetically normal embryo, so a variety of molecular techniques are being investigated.
- Study of endometrial receptivity: study of the molecular mechanisms that regulate the receptive state of the endometrium.

Emerging Researcher

Felip Vilella Mitjana

The research line of Endometrial Receptivity is based on the study of endometrial secretions, specifically the endometrial fluid. We use secretomic and genomic approach so we can describe new molecules that

can be correlated with the days of the menstrual cycle and may be involved in obtaining the window of implantation period, opening a new field of study for the analysis of the changes in the endometrium during the menstrual cycle and the cross-talk between the embryo and the endometrium.

Strategic aims

- Human male somatic cells can be directly converted into induced germ cell-like cells (iGS-LCs), through regulation exerted by DAZL and DDX4 on the pool of transcripts induced by PRDM1 and PRDM14, also up-regulated by LIN28A, while SYCP3 induction resulted essential for meiosis initiation. These iGC-LCs recapitulate all the transcriptomic and epigenetic features of human germ cells, can overcome meiosis to produce haploid cells and colonize the testicular niche in a xenograft model. However, the direct conversion from somatic to iGC-LCs is highly inefficient, so future investigation is essential to optimize this technology.
- TCL (thermochemiluminescence) is an oxidative stress (OS) determination technique of biological samples, based on heat oxidation induction. Embryos were cultured in independent well slides (Embryoslides) in the Embryoscope Incubator (Vitrolife, Denmark). TCL device could analyzed 368 samples of the 400 obtained. The oxidative parameters recorded were: TCL amplitude after 50 seconds (H1), 100 seconds (H2) and 280 seconds (H3). The Embryos cultured in less oxidized environment (those that present highest oxidation potential) showed higher implantation than the rest of cohort's embryos.

Main lines of research

- Artificial gamete creation through germ line reprogramming from human somatic cells.
- Use of Oxidative stress as a biomarker for embryo viability in human IVF and its use as an additional marker to the existing morphokinetic algorithms provided by time-lapse.

Emerging Researcher

Irene Cervelló Alcaraz

Research is based on the identification, characterization and isolation of Somatic Stem Cells in the endometrium. Endometrial Stem Cells have been identified in human and murine models, the regenerative potential of

these cells has been proven and there is an ongoing research on the existence of Lgr5 marker in the endometrial tissue. Moreover, the work is also focused on essential processes based on the regenerative medicine related with the porcine and human uterus.

Emerging Researcher

Francisco Domínguez Hernández

The main lines focus on research in molecular biology of the implantation and search for biomarkers of endometrial receptivity and embryonic competence. He was the Scientific Director of Embryomics, a technological company dedicated to the development of non-invasive diagnosis of chromosomal abnormalities in pre-implantation embryos using metabolomic techniques.

Emerging Researcher

Nicolás Garrido Puchalt

In this research line about male fertility, factors related to sperm physiology are intended to be discovered, and sperm selection techniques in order to improve reproductive results are being evaluated.

Emerging Researcher

Marcos Meseguer Escrivá

The group is a pioneer in the introduction and development of time-lapse technology, this technique allows the analysis of embryos without using an invasive technique. It represents an important conceptual advance in the evaluation of quality by measuring the processes of embryonic development against the embryonic stages. Parallel projects are being carried out with new hardware lapse technologies such as Auxogyn-Eeva and Geri-Genea. Our research focuses on oxygen consumption, oxidative profile and embryonic protein secretions.

Schematic diagram of the experimental setup of the study. B) Epigenetic characterization of the *in vitro* iGC-LCs from induced from fibroblasts showing circular heat map presentation of the methylation for 37 annotated human imprinted loci. C) Combined SYCP3 staining and FISH analysis reveals that meiotic-like cells recapitulate all the stages of the meiosis. D) Molecular assessment of the ploidy in iGC-LCs single cells by PCR products of the Amelogenin gene results in a peak of 118pb for the copy in X and a 124pb peak for the copy in Y. E) Percentage of tubules containing NuMA+/VASA+ iGC-LCs in xenotransplanted testis. F) Efficiency of colonization per 10e5 injected iGC-LCs in mouse transplanted testis. G) Illustrative pictures showing iGC-LCs xenotransplant results with NuMA+/VASA+ co-localization on the basal layer of germ cell depleted seminiferous tubules in MOCK and i6F transplanted testis. H) Proposed model for the germ line conversion and meiotic induction by direct conversion of somatic cells into iGC-LCs by i6F induction.

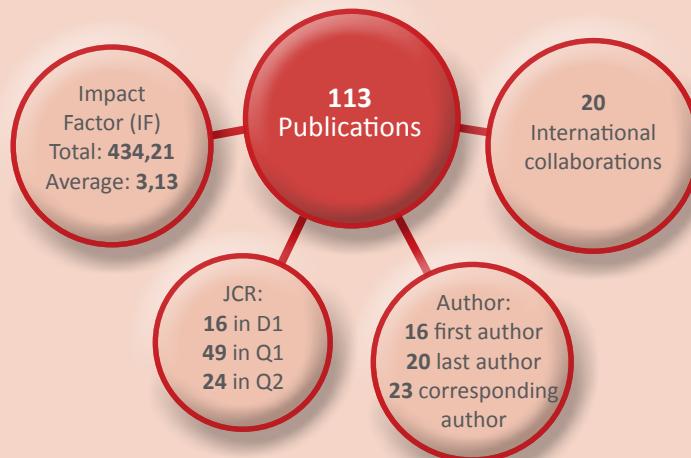

The diagram shows the main components of the TCL Analyzer. (Schnizer et al., 2003)

• AWARDS

Esther Barba Serrano received the award for the 4th best paper presented in the National Clinical Laboratory Conference held in Malaga in November 2017.

Department of Maxillofacial surgery

Strategic aims

- FIPSE project: Innovation in personalised prosthesis for maxillofacial reconstruction.
- Traslational research project for the development of implants with high added value through additive manufacturing.

Main lines of research

- Cost-effectiveness analysis on the management of oral surgery processes in patients with severe dependence and / or plurichatological chronicles with comorbidities. Proposal for a new organizational model of care.
- Evaluation of surgical implantation technique of the sphenopalatine ganglion neurostimulator to treat chronic cluster headache and disabling chronic migraine.
- Radiological evaluation of predictive factors of access to pterygopalatine fossa. Research surgical approach for the installation of a neuromodulator in the sphenopalatine ganglion to treat certain chronic headaches.
- Research on materials involved in bone regeneration.

• THESIS

Thesis title: Evaluación de la técnica quirúrgica de implantación de neuroestimulador a nivel del ganglio esfenopalatino para el

tratamiento de las cefaleas crónicas refractarias

Doctoral candidate: Natalia Ventura Martínez

Director(s): Mariano Marqués Mateo, Miguel Puche Torres

Date of the defense: 18/07/2017

Grade: Sobresaliente "cum laude"

Department of Gastroenterology and Hepatology

Strategic aims

- Update of protocols and clinical guidelines of the Department.
- It has been possible to consolidate the relationship of the Unit of Inflammatory Bowel Disease of our Department with the network of National Units, through collaborative studies that have been published in international journals of category Q1 and Q3. The group has also consolidated motility and pancreas research in the national and international area through consensus guides that have been published in journals with categories Q1-Q4.

Main lines of research

- On the section of gastroenterology, to continue the studies on digestive hemorrhage, acute pancreatitis, inflammatory bowel disease, motion sickness and digestive benign anorectal pathology.
- On the hepatology division to continue the analysis of hepatic encephalopathy, the nonalcoholic, epidemiological, therapeutic and immunoprophylaxis on Hepatitis Virus steatohepatitis. Also hepatocellular damage and nitric oxide and liver tumors.
- About endoscopy division: study on the therapeutic dilation, the ecoendoscopia diagnostics and therapeutics, ampulectomia, diverticulotomy of Zencker and digestive prostheses.

Department of Nuclear Medicine

Strategic aims

- Dosimetric assessment in patients with hyperthyroidism treated with 131-Iodine.
- Cardiac sympathetic nerve activity by 123I-MIBG scintigraphy in heart failure patients.
- Evaluation of left ventricular dysynchrony by Gated SPECT myocardial perfusion in the evaluation of cardiac resynchronization therapy.
- Radioguided surgery by intraoperative scintigraphy with portable gamma camera in patients with primary hyperparathyroidism and not conclusive pre-surgical scintigraphy.

- Sentinel node detection in breast cancer after neoadjuvant chemotherapy.

Main lines of research

- Radioembolization of hepatocarcinoma by resin microspheres labeled with 90-Ytrium.
- Assessment of cardiac sympathetic nerve activity by 123I-MIBG scintigraphy in heart failure patients.
- Evaluation of left ventricular dyssynchrony by Gated SPECT myocardial perfusion in patients with cardiac resynchronization therapy.
- Sentinel lymph node detection in breast cancer in patients with previous mammary surgery.
- Evaluation of screws loosening and other complications after lumbar spinal fusion surgery by bone SPECT.
- Diagnosis and follow-up of hyperplasia of the mandibular condyles by bone SPECT.

• AWARDS

Award for the best paper presented on prevention and control of surgical site infection (SSI) granted at the 19th National / 8th International Conference of the Spanish Society of Preventive Medicine, Public Health and Hygiene (SEMPSPH) to the paper "Response to primary vaccination against hepatitis B in patients on dialysis programs" June 15, 2017.

Department of Microbiology

Strategic aims

- Production of virus-like particles (VLPs) and P particles representative of diverse genotypes norovirus.
- Characterization of a new conformational epitope in the GII.4 norovirus capsid protein identified by a neutralizing monoclonal antibody.
- Epidemiological surveillance of circulating strains of rota-

virus and norovirus in Valencia and different geographical areas of Spain (Valladolid, Zaragoza, Barcelona, Murcia).

Main lines of research

- Molecular epidemiology of rotavirus.
- Characterization of norovirus genotypes causing outbreaks and sporadic cases of acute gastroenteritis.
- Study of the interaction between norovirus VLPs and P particles and receptors in saliva and intestinal cells.
- Phylogenetic analysis of rotavirus G12 strains isolated in different Spanish regions.
- Analysis of the relationship between histo-blood group antigens (HBGAs) and rotaviruses.
- Analysis by site-directed mutagenesis of a conformational epitope in the norovirus capsid protein recognized by a monoclonal antibody.

Department of Nephrology

Strategic aims

- To work together with cardiology Department in order to explore new developments in treatment of cardio-renal syndrome by peritoneal dialysis.
- Diabetic kidney disease: risk factors and progression. Diabetic kidney disease in dialysis patients.
- To analyze risk factors for developing hyperkalemia and the adherence to the current treatments.
- To establish the picture of the renal problems detected in Oncology and Hematology patients: kidney damage in the onco-hematologic patients.
- To analyze the incidence of acute kidney injury in hospitalized patients.

Main lines of research

- Treatment of cardio-renal syndrome by peritoneal dialysis.
- Diabetic kidney disease and Chronic kidney disease: risk factors and progression and proteinuria development. Diabetic kidney disease in dialysis patients.
- Hyperkalemia and chronic kidney disease.
- Onco-nephrology: kidney damage in the oncologic patient.
- Biomarkers of acute kidney injury.

Date of the defense: 14/07/2017

Grade: Sobresaliente "cum laude"

Department of Neurophysiology

Main lines of research

- The importance of the clinic in the role of magnetic resonance imaging (MRI) and electromyography (EMG) in the diagnosis of cervical and lumbosacral radiculopathy. Situation: data collection continues and its inclusion on a basis for further statistical analysis. Currently we have 353 patients with lumbosacral radiculopathy, and 54 with cervical radiculopathy. We continue to collect cases to increase the size of the sample.
- Definitive diagnosis of sleep disorders after clinical and polysomnographic evaluation in patients with clinical suspicion of sleep apnea-hyponeal syndrome and normal or inconclusive respiratory polygraphy. Situation: data collection continues and its inclusion on a basis for further statistical analysis. We have 82 patients collected. We continue to collect cases to increase the size of the sample.
- (3) Characterization and evaluation of alterations in vibration, pain and thermal sensitivity in cirrhotic patients with minimal hepatic encephalopathy.

Department of Radiologic Diagnosis

Main lines of research

- To participate in clinical trials with Hematology and Oncology Departments by performing CT and / or biopsies to check inclusion of patients in new chemotherapy treatments.
- To evaluate cerebral reperfusion syndrome after treatment of carotid stenosis by stent.
- To study gastric pre-oesophagectomy conditioning to reduce the incidence of dehiscence of sutured anastomoses.

ACTIVITIES DEVELOPED

Incorporation of samples in pre-existing collections:

Oncological Node:

- Collection of solid tumors: 154 new cases.
- Collection of peripheral blood and derivative products in patients suffering from breast cancer: 1592 new sample donations.
- Collections of peripheral blood and derivative products in patients suffering from lung cancer: 235 new sample donations.
- Collection of peripheral blood and derivative products in patients suffering from melanoma: 70 new cases.
- Collection of peripheral blood and derivative products in patients suffering from gastrointestinal: 602 new sample donations.

Immunological Diseases Node:

- Collection of peripheral blood and derivative products in patients suffering from Systemic Lupus Erythematosus or other autoimmune diseases: 10 new cases.

Cardiovascular Node:

- Collections from the cardiovascular node: no new cases.

Other collections:

- Collection sepsis gravis and septic shock: 113 new sample donations.
- Collection of peripheral blood and derivative products in patients suffering from Multiple Esclerosis: 2 new cases.
- Collection of peripheral blood and derivative products in standard population: 17 new cases.

Incorporation of new collections:

- Collection of peripheral blood and derivative products in patients suffering from head and neck tumors: 80 sample donations.
- Collections of peripheral blood and derivative products in patients suffering from brain tumors: 9 sample donations.
- Collections of peripheral blood and derivative products in patients suffering from gynecological tumors: 8 sample donations.

In summary, 2892 new sample donations have been received and 9891 samples have been processed in 2017 at INCLIVA Biobank facilities.

In addition, the Biobank has surplus diagnostic samples from the HCUV Pathology and Hematology service that may be used in research provided they have the corresponding Biobank Informed Consent.

4.5.2 Oncology Phase I Clinical Trials Unit

INCLIVA is the only hospital in Valencia performing Phase I cancer clinical trials, and one of the few in Spain. Phase I trials are those in which a substance or product is tested in humans for the first time.

INCLIVA is conducting, through the Oncology and Hematology Department, 189 clinical trials, 99 of them related to treatment in the early stages of testing (33 phase I or "first in human" and 66 phase II). INCLIVA's new facilities provide a full floor and a half specifically dedicated to host the unit.

The unit aims to develop and select new drugs through clinical trials and to perform studies related to the pathogenesis, prognosis and new experimental therapies in solid tumors.

FUNCTIONS:

The unit implements early clinical trials with experimental agents in the field of Oncology.

EQUIPMENTS:

- -80º C Freezer
- -20º C Freezer
- Refrigerated desktop centrifuge
- Scientific refrigerator
- Conventional fridge
- Defibrillator
- Electrocardiographic equipment
- 7 monitors (blood pressure, heart rate and O2 saturation)
- 7 double medication infusion pumps
- 7 heads gases (oxygen and vacuum)

LOCATION:

The following facilities are located on the second floor:

- Reception and waiting room
- 2 Consulting rooms
- Staff room

- Meeting room
- Therapy room

The third floor hosts the following facilities

- Clinical trials office
- Monitoring room
- Clinical trials archives

PERSON IN CHARGE:

Head of Unit: Prof. Andres Cervantes Ruipérez

E-mail: Andres.Cervantes@uv.es

Contact phone: +34 961973528

Clinical trials
and other
studies

• 5.1. Clinical Research Ethics Committee (ECCR) Activity

On January 13th 2016 the new Royal Decree 1090/2015 came into force, regulating clinical trials with drugs, Medical Research Ethics Committees and the Spanish Clinical Studies Registry. This new regulatory framework has introduced important changes in the management and evaluation of human clinical trials at the national level. Since its publication, only one Committee is needed to evaluate a Clinical Trial, and issues a single and binding judgement for the entire country.

In response to this, the Clinical Research Ethics Committee of the Hospital Clínico Universitario de Valencia has obtained reclassification in the ISO 9001 standard. This recognition guarantees the quality of the assessment performed by the ECCR, whose main goal is to ensure respect for the rights and safety of participants in clinical studies and other research initiatives.

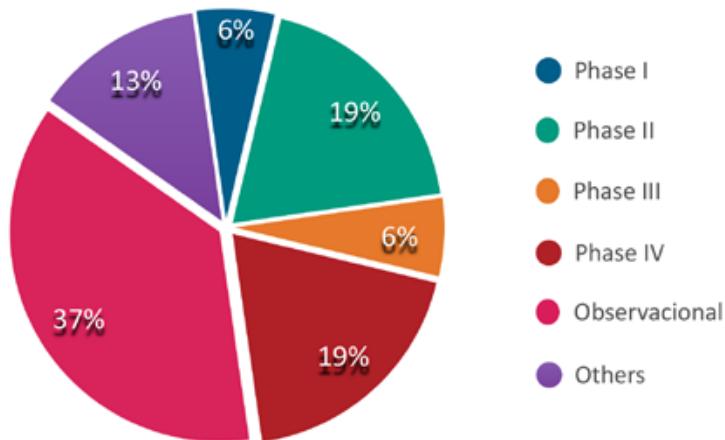

During 2017, the ECCR has processed a total of 16 studies (clinical trials and observational studies): 12 positively valued and 4 pending approval.

The distribution of these trials by phase is: Phase I: 1; Phase II: 3; Phase III: 1; Phase IV: 3; Observational studies: 6; others: 2.

The following graphic shows the number of clinical trials and other studies according to their typology.

Distribution of trials

Distribution of clinical studies depending on the department where they are performed is as follows:

SERVICE	Number
Anesthesia and Resuscitation	4
Cardiology	1
Digestive Medicine	2
Endocrinology	1
Gynecology	1
Haematology	2
Oncology	1
Pharmacy	1
Pneumology	2
Primary Care	1
TOTAL	16

5.2. Clinical research activity performed by the Valencia Clínico-Malvarrosa Health Department

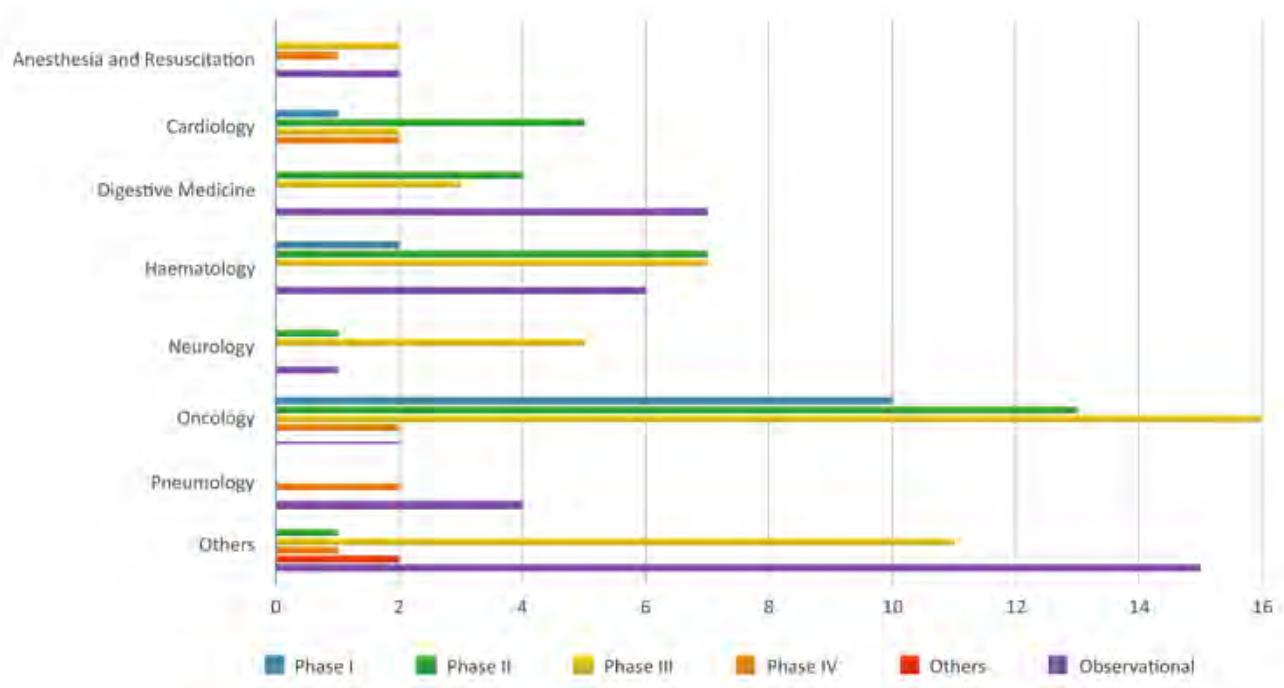

5.2.1. Activity during 2017

INCLIVA Health Research Institute manages the clinical studies (trials, observational studies, and research projects) carried out by *Hospital Clínico Universitario* and the Valencia Clínico-Malvarrosa Health Department researchers.

During 2017, INCLIVA has assessed a total of 143 studies (clinical trials and observational studies).

The distribution of these trials by phase is: Phase I: 13, Phase II: 31, Phase III: 46, Phase IV: 6, Observational studies: 43, others: 4. The following table shows the number of clinical trials and other studies according to their phase and department.

	Phase I	Phase II	Phase III	Phase IV	Others	Observational	TOTAL
Anesthesia and Resuscitation	-	-	2	1	-	2	5
Cardiology	1	5	2	2	-	6	16
Digestive Medicine	-	4	3	-	-	7	14
Haematology	2	7	7	-	-	6	22
Neurology	-	1	5	-	-	1	7
Oncology	10	13	16	2	-	2	43
Pneumology	-	-	-	-	2	4	6
Others	-	1	11	1	2	15	30
TOTAL	13	31	46	6	4	43	143

The Department of Medical Oncology leads in the number of trials assessed by INCLIVA, followed by the departments of Haematology, Cardiology and Digestive Medicine. These four services make up over 66% of the total processed trials.

SERVICE	Total	%
Anesthesia and Resuscitation	5	4
Cardiology	16	11
Digestive Medicine	14	10
Haematology	22	15
Neurology	7	5
Oncology	43	30
Pneumology	6	4
Others	30	21

In turn, the Principal Investigators (PI) distribution shown below indicates the number of PIs involved in clinical trial development:

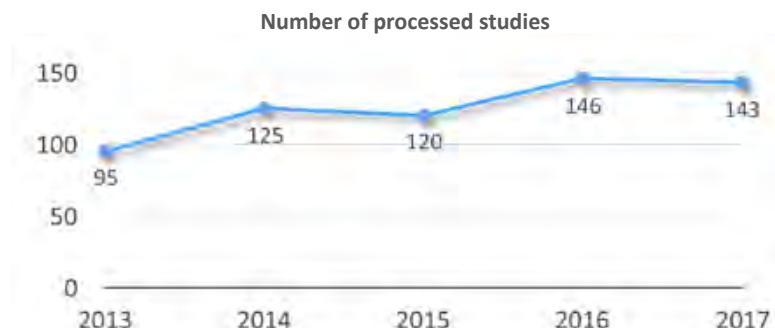

SERVICE	Number of PIs	%
Anesthesia and Resuscitation	4	6.9
Cardiology	6	10.3
Digestive Medicine	4	6.9
Haematology	7	12.1
Medical Oncology	8	13.8
Pneumology	4	6.9
Neurology	4	6.9
Others	21	36.2
Total	58	100

Regarding the distribution of studies by sponsor, 34 trials are considered Independent Clinical Research (trials from associations, groups, foundations, and private individuals), and the rest have been sponsored by the pharmaceutical industry.

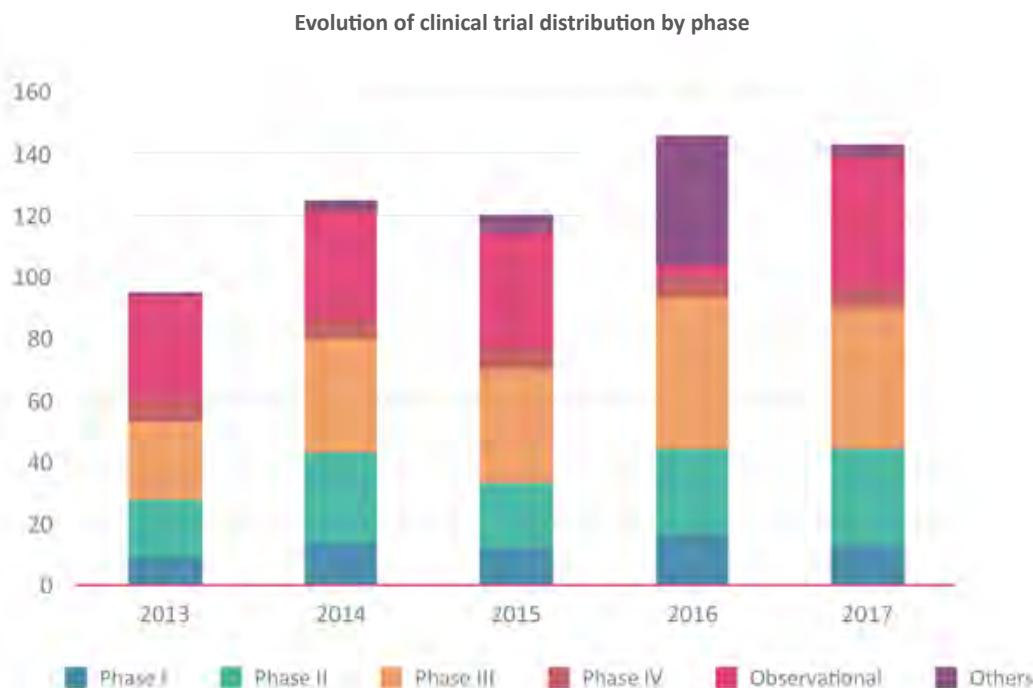

SPONSOR	Nº
INDEPENDENT CLINICAL RESEARCH	43
MERCK	7
ASTRAZENECA	6
NOVARTIS FARMACÉUTICA S.A.	5
BAYER	4
BRISTOL	4
GILEAD SCIENCES, INC	4
INCYTE	4
JANSSEN	4
ABBVIE	3
AMGEN	3
F. HOFFMANN-LA ROCHE LTD	3
MEDICAL SCIENTIA INNOVATION RESEARCH	3
ROCHE FARMA S.A.	3
TG THERAPEUTICS, INC	3
MERRIMACK PHARMACEUTICALS INC.	2
OTHER INDUSTRIAL SPONSORS	42

5.2.2 Assessment activity during last 5 years

The graphic below shows that the number of studies processed yearly remains close to a hundred.

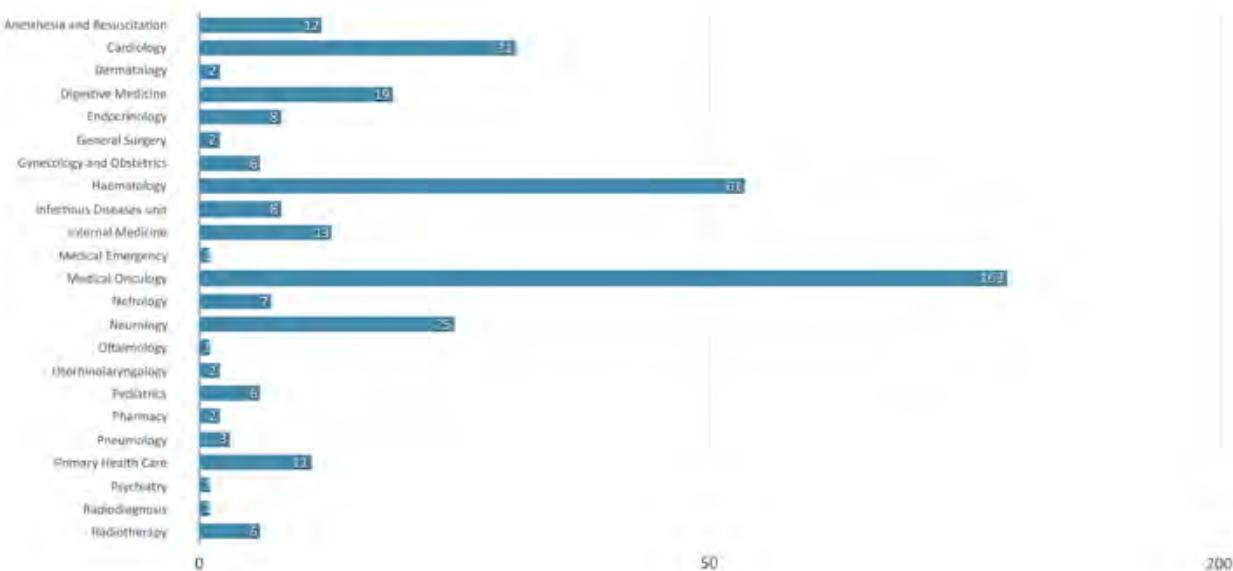

One of INCLIVA's main goals is to develop clinical research at its early stages, thus contributing to translational research that moves scientific knowledge from bench to bedside. In this regard, during the period 2013-2017, Phase I and Phase II trials are prioritized and their numbers remain stable as shown in the graph below.

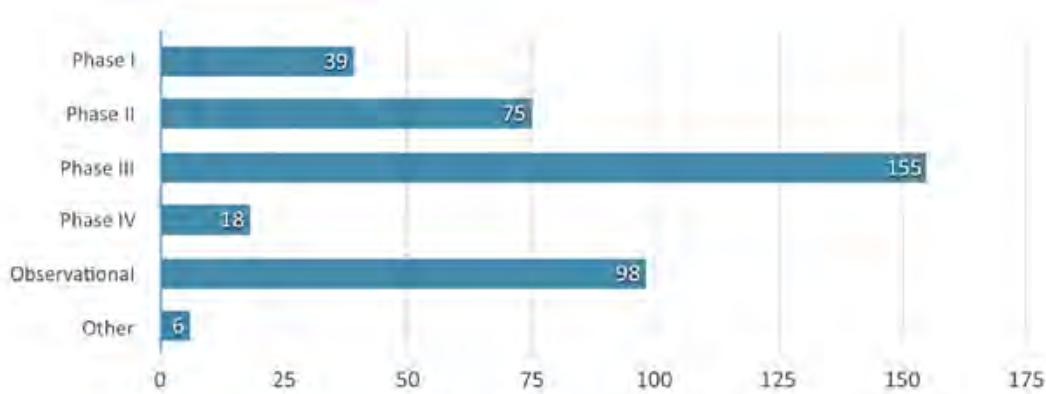

5.2.3. Ongoing studies

During 2017, there have been 391 active studies. The distribution of clinical trials per department analyzed below uses a semilogarithmic scale due to the major difference between the Department of Medical Oncology and the rest of the Departments.

The distribution of ongoing trials and other studies according to typology is as follows:

6

Initiatives
for research
promotion

6.1. VLC - Bioclinic research grants

The main aim of VLC-Bioclinic program is to promote the cooperation in research, technological development and innovation in health, in order to generate synergies and partnerships among researchers and professionals and strengthen translational research with innovative results that benefit patients.

Being aware that the processes of innovation and knowledge transfer require multidisciplinary collaboration among professionals from various fields, both the University of Valencia which is interested in establishing concrete partnerships with hospital foundations which are related to the area of specialization in health and INCLIVA, whose general objective is to promote, encourage, favour and implement the scientific and technical research, launched together in 2015 the VLC-Bioclinic Program.

After the excellent reception of this initiative, these are the projects active in 2017.

Principal Investigator: Eva Villamón Ribate, María Luisa Gil Herrero

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2017

Total Budget: 4.000€

Title: *Eriptosis como nuevo biomarcador de prognosis de enfermedad cardiovascular en sujetos hipercolesterolémicos*

Principal Investigator: Sergio Martínez Hervás, Antonio Cilla Tatay

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2017

Total Budget: 4.000€

Title: *Diagnóstico y estratificación de pacientes de lupus eritematoso sistémico mediante espectrometría de masas dirigida a la detección de histonas circulantes*

Principal Investigator: Mª José Forner Giner, Carlos Romá Mateo
Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia
Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2017
Total Budget: 4.000€

Title: Nuevas terapias dirigidas a la eliminación selectiva de células senescentes en el tratamiento de la disfunción vascular asociada al envejecimiento

Principal Investigator: Pascual Medina Besso, Ana Costero Nieto
Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia
Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2017
Total Budget: 4.000€

Title: Aplicación de la termografía infrarroja en pediatría
Principal Investigator: Francisco Núñez Gómez, M. Rosario Salvador Palmer
Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia
Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2017
Total Budget: 4.000€

Title: Diseño y prueba de concepto de una cinta rodante con tecnología inmersiva para valorar y reeducar la marcha en pacientes con secuelas de ictus
Principal Investigator: Alejandro Ponz de Tienda, Mª Arántzazu Ruescas Nicolau
Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia
Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2016-2017
Total Budget: 4.000€

Title: Análisis proteómico de biopsias líquidas para personalizar las terapias dirigidas contra el adenocarcinoma pulmonar
Principal Investigator: Amelia Insa Mollá, Julián Carretero Asunción
Funding Body: Fundación Investigación Hospital Clínico

Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2016-2017
Total Budget: 4.000€

Title: Estudio de la viabilidad de técnicas de aprendizaje automático para discernir la presencia de endometriosis sin necesidad de cirugía (ENDOMETRIOSIS assessed by Machine Learning)

Principal Investigator: Raúl Gómez Gallego, José David Martín Guerrero
Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia
Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2016-2017
Total Budget: 4.000€

Title: Secuencialidad de la contracción muscular: importancia en la detección precoz de disfunciones lumbopélvicas, cervicales y de la cintura escapular

Principal Investigator: Antonio Silvestre Muñoz, Josep Carles Benítez Martínez
Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia
Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2016-2017
Total Budget: 4.000€

Title: Diagnóstico y seguimiento del pie diabético mediante termografía infrarroja

Principal Investigator: Carmen Blasco Molla, Rosa María Cibrián Ortiz de Anda
Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia
Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia
Duration: 2016-2017
Total Budget: 4.000€

Title: Estudio de la respuesta inmune circulante frente a antígenos de diferenciación melanocitaria y su correlación con el estadio clínico en pacientes con melanoma cutáneo
Principal Investigator: José María Martín Hernández, Carlos Monteagudo Castro

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 4.000€

Title: Efectos cognitivos de la cirugía cardiovascular mediante circulación extracorpórea (CEC)

Principal Investigator: José Ángel Bahamonde Romano, Raúl Espert Tortajada

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 4.000€

Title: Implicación de la familia de proteínas MBNL en cáncer de mama HER2+ y su posible relación con la respuesta/resistencia al tratamiento con trastuzumab

Principal Investigator: Pilar Eroles Asensio, Rubén Artero Allepuz

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 4.000€

Title: Análisis de datos avanzado como ayuda a la decisión en clínica

Principal Investigator: María Téllez Plaza, Joan Vila Francés

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 4.000€

VLC- BIOCLINIC Subprogram B

Title: Localización por computador de focos ectópicos en el tracto de salida del ventrículo derecho a partir de mapas electroanatómicos

Principal Investigator: Francisco Javier Chorro Gascó, Miguel

Lozano Ibáñez

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2017

Total Budget: 8.500€

Title: Desarrollo de un kit multiplex para la detección simultánea de biomarcadores para el diagnóstico y pronóstico de la sepsis y el shock séptico. Implementación de la patente europea

Principal Investigator: Federico Pallardó Calatayud, Nieves Carbonell Monleón

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2017

Total Budget: 8.500€

Title: Detección en biopsia líquida del efecto de las fuerzas mecánicas en el cáncer a través de mutaciones implicadas en remodelación del citoesqueleto

Principal Investigator: Rosa Noguera Salvá, Andrés Cervantes Ruipérez

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2017

Total Budget: 9.500€

Title: Diagnóstico precoz de la sepsis neonatal mediante la monitorización de la variabilidad cardiaca

Principal Investigator: Empar Lurbe Ferrer, Javier Calpe Maravilla

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2017

Total Budget: 9.500€

Title: Desarrollo de péptidos bloqueadores de la toxicidad de expansiones CUG responsables de Distrofia Miotónica

Principal Investigator: Rubén Artero Allepuz, Enrique García-España Monsonís

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2017

Total Budget: 9.500€

Title: Análisis de los perfiles de expresión de miRNAs utilizando mapas auto-organizados para el pronóstico de pacientes con déficit de alfa-1 tripsina

Principal Investigator: Francisco Dasí, Marcelino Martínez

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 9.000€

Title: Desarrollo de una herramienta para el diagnóstico temprano, monitorización y seguimiento por imagen cerebral, del deterioro cognitivo leve (encefalopatía hepática mínima) en pacientes cirróticos

Principal Investigator: Carmina Montoliu, Jesús Malo

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 9.000€

Title: Validación del estudio traslacional de un ensayo plasmónico de espermina en orina como biomarcador de cáncer colorrectal

Principal Investigator: Guillermo Sáez, Julia Pérez

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 9.000€

Title: Nueva diana farmacológica en la prevención del riesgo cardiometabólico

Principal Investigator: José Tomás Real, Pilar D'Ocón

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico

Universitario de Valencia

Duration: 2016-2017

Total Budget: 6.000€

Title: Heterogeneidad clonal en cáncer: Biopsia líquida como tecnología de alto rendimiento

Principal Investigator: Andrés Cervantes, Rosa Noguera

Funding Body: Fundación Investigación Hospital Clínico Universitario de Valencia

Beneficiary Institution: Fundación Investigación Hospital Clínico Universitario de Valencia

Duration: 2016-2017

Total Budget: 6.000€

6.2 Grants for secondments in centers of excellence

To allow researchers to acquire new knowledge for clinical and research techniques, INCLIVA promotes every year its Grants for research secondments in centers of excellence.

Since the establishment of this scholarship program, over 100 professionals have visited national and foreign centers. In 2017 the average number of awards was 13, 12 of them to international centers and 1 to national ones.

The awarded researchers and the assigned training centers in 2017 are shown in the following table:

Capilla Guasch, Pau

ICNE Sao Paulo, Brasil

Cassinello Fernández, Norberto

Azienda Ospedaliero Universitaria Pisana, Italia

Domínguez Navarro, Fernando

Cochrane Back and Neck Review Group, Canadá

Garcés Albir, Marina

Azienda Ospedaliero Universitaria Pisana, Italia

Gil Badenes, Joaquín

Massachusetts General Hospital, Estados Unidos

Gomes Marques, Patrice

Institute of Metabolic Science, Reino Unido

Herrero Cervera, Andrea

Whitaker Cardiovascular Institute, Estados Unidos

Llorca Cardenosa, Marta Jessica

The Institute of Cancer Research, Reino Unido

Martí Aguado, David

Hospital Clínic de Barcelona, España

Pellín Carcelén, Antonio

Institute of Biology, Medical Chemistry, Grecia

Placencia Morán, Paula

Instituto de Psicoanálisis Multifamiliar, Argentina

Téllez Plaza, María

Mailman School of Public Health, Estados Unidos

Zolfaroli, Irene

Azienda Ospedalierouniversitaria Careggi, Italia

- *Curso “Cómo estructurar y presentar un proyecto de investigación clínica”*
- *Curso de Bioestadística I: Análisis exploratorio de datos (2017)*
- *Curso de bioestadística II: Comparación de grupos (2017)*
- *Curso de bioestadística III: Análisis estadístico de Ensayos Clínicos (2017)*
- *Curso de anatomía quirúrgica aplicada hepato-bilio-pancreática. 6ª edición*
- *Curso de Buenas Prácticas Clínicas para investigadores. 2ª edición*
- *Curso-taller de Ecocardiografía y Ecografía pulmonar aplicada al postoperado de c. cardíaca con simulación*
- *Curso de patología infecciosa 2017*
- *III Curso avanzado de educación diabetológica*
- *IX Curso de Ventilación Mecánica Pediátrica (Asistencia inicial y transporte)*
- *11TH Hands-on Course on Neurosurgical Approaches: endoscopy and microsurgery in the ventricular system and skull base*

INCLIVA Seminars (3)

- *Seminario INCLIVA - Dr. Mika Ala-Korpela.*
- *Seminario INCLIVA - José Jalife, M.D.*
- *Seminario INCLIVA - Prof. Antonio Ferrer-Montiel.*

Workshops (21)

- *I Jornada “Alianza en investigación traslacional en enfermedades raras de la Comunitat Valenciana”*
- *I Jornada científica de Residentes del Hospital Clínico Universitario de Valencia*
- *I Jornada Valenciana del Pie Zambo*
- *I Jornada del Comité de tumores y malformaciones vasculares HCUV*
- *Jornada “La investigación sanitaria con perspectiva de género”*
- *Jornada de investigación en Anestesiología y Cuidados Intensivos: Investigación en Sepsis*
- *II Jornada de investigación en prediabetes, diabetes y enfermedad cardiovascular*
- *Jornada Neumología Infantil y Pediatría de Atención Primaria: Obligadas a entenderse*
- *6ª Jornada de Actualización en Vacunas Hospital Malvarrosa*
- *Jornada de cooperación en innovación REDIT – INCLIVA*
- *II Jornada INCLIVA sobre Insuficiencia Cardiaca: “El paciente con diabetes”*

6.3 Training and Teaching Activities

INCLIVA and its researchers play an important role in the training of researchers and of health sciences degree and master students, which come from of Valencian universities and other national and international regions.

The number of internal secondments in 2017 was 6 which represent an aggregate of 19 months of training during the period. A total of 15 stays outside of INCLIVA were carried out by researchers.

The Institute has kept on developing, along the year, its annual training program. The courses, seminars and educational conferences that have been developed during the year 2017 are the following:

Courses (16)

- *Curso “Fuentes y recursos de información” 2017*
- *III Workshop Internacional de Ecografía y Resonancia Anorrectal*
- *Fundamental Critical Care Support Course - Marzo 2017*
- *Curso “Comunicación de los resultados de investigación 2017”*

- 9^a Jornada Valenciana "Tabaquismo y Respiración": *Tabaquismo y apnea del sueño*
- Jornada "¿Qué sabemos de las enfermedades autoinflamatorias?"
- Jornada de Investigación en Enfermedades Raras: *Ciliopatías*
- Celebración de 30 años de actividad en Trasplante de Médula Ósea en el Hospital Clínico Universitario de Valencia
- I Jornada Investigación e Innovación Enfermera
- I Jornada de Enfermería Nefro-Vascular
- Jornada Interhospitalaria: Técnicas de imagen en la evaluación del paciente candidato a TAVI
- IV Jornada de formación para familiares - Fibrosis Quística
- Jornadas sobre el tratamiento quirúrgico de las metástasis peritoneales
- Thyroidectomies for Benign Cases: Live Surgery Workshop
- IV Workshop Cirugía laparoscópica colorrectal avanzada

Conferences (2)

- Seminario David García y Ana Ramos: "Exploración neurológica"
- Seminario Marcia Regina Cominetti

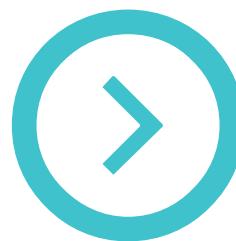

Other activities in which INCLIVA participates (4)

- Jornadas específicas de formación de Espondilíartritis para médicos de Atención Primaria
- Curso de bienvenida de residentes 2017
- Reunión anual de la sección de cardiología geriátrica
- Toma de decisiones en el ámbito de las enfermedades crónicas. El caso de la diabetes

7

Highlights

INCLIVA joins the European Big Data Value Association in the field of biomedical research.

JANUARY

INCLIVA welcomed a visit from several University of Valencia participants in the fifth Biomedical Research Conference.

Gene key in developing resistance to HER2-positive breast cancer treatment identified for the first time - CCNE2 protein is identified as involved in resistance to HER2-positive breast cancer treatment.

FEBRUARY

Álvaro Bonet and Ana Lluch received the R&D in Oncology award from representatives of the Best in Class awards.

MARCH

INCLIVA is the first health research foundation to obtain the seal of quality "Doing Business. Equal Opportunities" granted by the Vice Presidency and Ministry of Equality and Inclusive Policies of the *Generalitat Valenciana*.

APRIL

The INCLIVA board renews its management, appointing Andrés Cervantes as new Director General and Vicente de Juan as Economic Director.

MAY

Genetics also influences bone quality - two micro-RNAs alert to the risk of osteoporosis and bone fracture. These are the conclusions of collaborative research with other Spanish centers recently published in *Scientific Reports*.

JUNE

INCLIVA coordinates the Spanish arm of a European project to improve treatment for patients with heart problems - INCLIVA the only Spanish participant in the *BigData@Heart* project.

JULY

INCLIVA researchers develop *HistShock*, a diagnostic/prognostic kit for septic shock to reduce the over 5 million deaths per year from sepsis.

AGOST

SEPTEMBER

Researchers from INCLIVA and the University of Valencia show the capacity for change of the structure and connectivity of interneurons in the adult brain, the communication bridge between neurons.

The Anesthesia Research Group obtains the ISO 9001: 2015 Standard accreditation.

OCTOBER

A new prosthetic implant is designed that stands out for safer implantation in collaboration with *Universidad Politécnica de Valencia*.

NOVEMBER

Mechanism identified that activates the hedgehog pathway involved in rhabdomyosarcoma, a type of childhood cancer - Experimental animal models showed that in cells without ligands, tumors could not grow or had limited growth.

DECEMBER

Ana Lluch and Carlos Simón join INCLIVA's Board.

INCLIVA
social
initiatives

INCLIVA's mission is "to contribute to improve citizen health and quality of life"; therefore, in addition to our own research projects, the institute is also involved in and committed to initiatives promoted by individuals close to someone ill.

INCLIVA is currently working on four joint initiatives: *Proyecto Mama*, *Proyecto Paula*, *Fundación Le Cadó* and *Nico contra el Cáncer*. One of the fundamental premises of the institute is maximum transparency in donations management.

These donations provide tax benefits under Article 66 of the Law 30/1994 of 24 November on Foundations and Tax Incentives for private participation in general interest activities.

8.1 Philanthropic Projects

PROYECTO PAULA

This project was set up in 2011 by Cristina Ponce, when her 8 year old daughter Paula was diagnosed with type 1 diabetes mellitus, a disease that completely destroyed her insulin-producing cells.

Proyecto Paula focuses on raising public and private funds and resources, to research diabetes and to find a cure for Paula and other people with this illness.

INCLIVA has several groups dedicated to research in diabetes and belongs to the Biomedical Research Centre in Diabetes and Associated Metabolic Diseases (CIBERDEM), a public consortium led by Spain's excellence in research in diabetes and related metabolic diseases, as well as the translation of research results into clinical practice.

PROYECTO MAMA / En tu seno

Proyecto Mama was started in September 2012 by Pedro Alarcón after the death of his mother from breast cancer. The purpose of this initiative is to raise public and private funds to investigate the disease.

Breast cancer is the most common tumor in women, appearing from around age 30, gradually increasing in impact, affecting up to 9% of the female population at 70 years of age.

FUNDACION LE CADÓ

Fundación Le Cadó was created in 2010 under the leadership of its president Elvira Monferrer Daudi. This initiative seeks to unite efforts and resources in supporting this kind of tumor research, which is currently the fourth leading cause of death in women.

Fundación Le Cadó collaborates with INCLIVA in funding the research project "Study of breast cancer in young women under 35 years," conducted by Dr. Gloria Ribas. It also involves other researchers such as Dr. Isabel Chirivella (a genetic diagnosis specialist physician) and Ms. Carmen Peña Chilet, the entire team led by the oncologist Dr. Ana Lluch.

NICO CONTRA EL CANCER

The movement “*Nico contra el cancer*” was formed in November 2015 in Ourense, after Nicolas Rodriguez Leal came home following a surgical intervention at the *Hospital La Paz* in Madrid.

The movement is led by his mother and aunts as an activity under the umbrella of the *Asociación NEN*, whose main objective is to finance research projects on childhood cancer, and more specifically solid tumors.

FUNDACION NEUROBLASTOMA

The Neuroblastoma Foundation, created in 2017, funds research on neuroblastoma, a particularly aggressive type of childhood cancer that affects the nervous system. Survival figures have not improved in recent years. The Neuroblastoma foundation informs families about existing treatments, and brings together families of sick children, motivating them to raise funds for research through numerous campaigns. The funds are destined to research projects and clinical trials in Spanish laboratories and hospitals.

8.2 Social initiatives news

INCLIVA's first project in Precipita, a funding record

The project *Improving childhood tumor diagnosis by bioimaging* by the researcher Rosa Noguera was the first INCLIVA project to be presented in the Precipita Network, the public micropatronage platform under the Ministry of Economy and Competitiveness.

Led by Dr. Noguera, the INCLIVA and *Universitat de Valencia* Research Group is specialized in oncopediatrics and specifically in the study of morphological and genetic techniques of the causes, development and new therapies of childhood bone tumors and soft tissues.

The project focuses on studying and relating forms, sizes, locations and connections between tumor cells and cells incorporated into the tumor mass, as well as the textures of intercellular elements in microscopic images reconstructed in 3D. These are accessible to all researchers via a website, expanding the global network of collaborative research in pediatric cancer.

The project met its goal of reaching 25,000€ in ninety days and finally surpassed it, reaching 32,950€, thus placing it among the projects to receive the most funding. According to Dr. Noguera, “any donation, even the smallest, is appreciated and we are very excited about the support shown. We have far exceeded our expectations. It is great that society is involved in supporting research because in the end we all benefit.”

The contributions received will be used to hire two researchers in digital pathology, to enhance microscopic tumor image analysis and test the design of prototype patterns of different neuroblast tumor tissues at risk of relapse or showing poor response to therapy. These will be included in a website accessible to other researchers.

The INCLIVA management team and Dr. Noguera’s Research Group want to thank the Precipita platform for their collaboration in promoting the project, as well as all those who have made a contribution to the project, in particular the port stevedores of SEVASA-puerto de Valencia for donating their Christmas basket, the company ALSA for its voluntary donations campaign from its website and the company Surus Inversa and its auctions platform Escrapalia.

8.3 Private philanthropic donations and acknowledgments

On behalf of INCLIVA, we want to thank all the people who have helped our research through their donations, for their support and solidarity. For us, this collaboration means much more than an economic contribution: it is the encouragement we need to keep investigating and working in research.

Private donations

María Dolores Almendros Catalá, Esteban Borreda Bolinches, Rafael Pascual Caballer Molina, Guillermo Caballero De Luján, Nicolás Carrión Domínguez, Joaquín Casado Catalina, Antonio Cerdán Muñoz, María Luisa Ebri Méndez, Natalia Font Ferrando, Claudia Galán Gras, Nuria Gelonch Soler, Olga María Herrero Chamorro, Alicia Martínez Espinosa, Fernando Rodríguez Miguélez, Rosalia Sánchez Rilla, Ana Sanz Moliner, Antonia Serrano Monedero, María Inmaculada Serrano Monedero.

Corporative donations

Abbott Laboratories S.A., Abbvie Spain S.L.U., Actelion Pharmaceutical España S.L., Asociació Familiars i Amics Pacients amb Neuroblastoma, Asociación La Virgen de los Dolores,

Ayuntamiento de Puzol, Boston Scientific S.A., Canals Contra el Cáncer, Club D'Atletisme Meliana, Daiichi-Sankyo España S.A., Dextromedica S.L., Doctaforum Servicios, Fresenius Kabi España S.A., Fundación Bancaria Caixa D'Estalvis i Pensions de Barcelona, Fundación Española de Hematología y Hemoterapia, Fundación Lecadó, Fundación Neuroblastoma, Fundación Patrimonio Benéfico Marqués de Dos Aguas, Gaspunt S.A., GE Healthcare Biosciences S.A., Gestión de Bienes y Servicios S.L., Grupo Gasmedi S.L.U., Junta Asociada Provincial de Valencia de la Asociación Española Contra el Cáncer, Junta Local Contra el Cáncer de Llosa de Ranes, Junta Local Contra el Cáncer Montesa, Laboratorios Gebro Pharma S.A., Laboratorios VIIV Healthcare S.L., Logimed S.L.U., Merck S.L., Nestlé España S.A., OPC Congress S.L., Otsuka Pharmaceutical S.A., Pfizer Gep S.L.U., Prosmédica Valencia S.L., Radiometer Ibérica S.L., Roche Farma S.A., Sanlúcar Fruit S.L., Sociedad Amigos Internacionales de Pedralba, Sociedad Española de Arteriosclerosis, Sociedad Española Interdisciplinaria del Sida, Sofpromed Investigación Clínica S.L.U., SQR Medical Resources S.L.U., Sumedex S.A., Swedish Orphan Biovitrum S.L., Variocana Asociación Interna de Reiki y Terapias Alternativas, Vifor Fresenius Medical Care Renal Pharma España S.L.U., Vitro S.A., W.L. Gore y Asociados S.L.
